

DISTRIBUTED ECONOMICS FOR BANKERS

— PRESENTED IN LESS THAN 100 SLIDES BY YOUR FRIENDLY BLOCKCHAIN EVANGELISTS —

neuroware

INTRODUCING ME - MARK - THE BITCOIN (**CURRENCY**) ADDICT

Mark Smalley
mark@neuroware.io

- Founder & CEO of Neuroware
- Living in Malaysia for 19 Years
- Award Winning OpenSource App Developer
- Building Blockchain Applications for 5 Years
- Community-Creator & Technology Evangelist

INTRODUCING NEUROWARE - THE COMPANY I HELPED BUILD

- 1st Malaysian company to graduate from 500 Startups in Silicon Valley
- 1st company in Asia to provide public blockchain APIs and toolkits
- 1st startup to develop non-financial blockchain agnostic protocols
- Toured Europe providing developer workshops in 6 countries over 8 days
- Helped organize first bank-backed blockchain hackathon in Singapore
- Only VC-backed blockchain development consultants within Asia
- Worked with the central bank of Malaysia and Ministry of Finance

A BRIEF HISTORY OF MODERN MONEY

WHERE NO IDEA IS A NEW IDEA

IT ALL STARTS HERE - ON THE ISLAND OF YAP

SHOPPING WAS NOT EASY

SO THEY CREATED A PUBLIC LEDGER

UPDATES REQUIRED GROUP CONSENSUS

- Size wasn't everything
- The history of each stone determined it's individual value
- Conducting transactions quite literally involved a song & dance
- This required the majority of people from the village to be present

BUT IT COULD NOT SCALE - THEY EVENTUALLY SWITCHED TO US\$

SETTING THE POST-CIVIL STANDARD

SETTING THE GOLD STANDARD

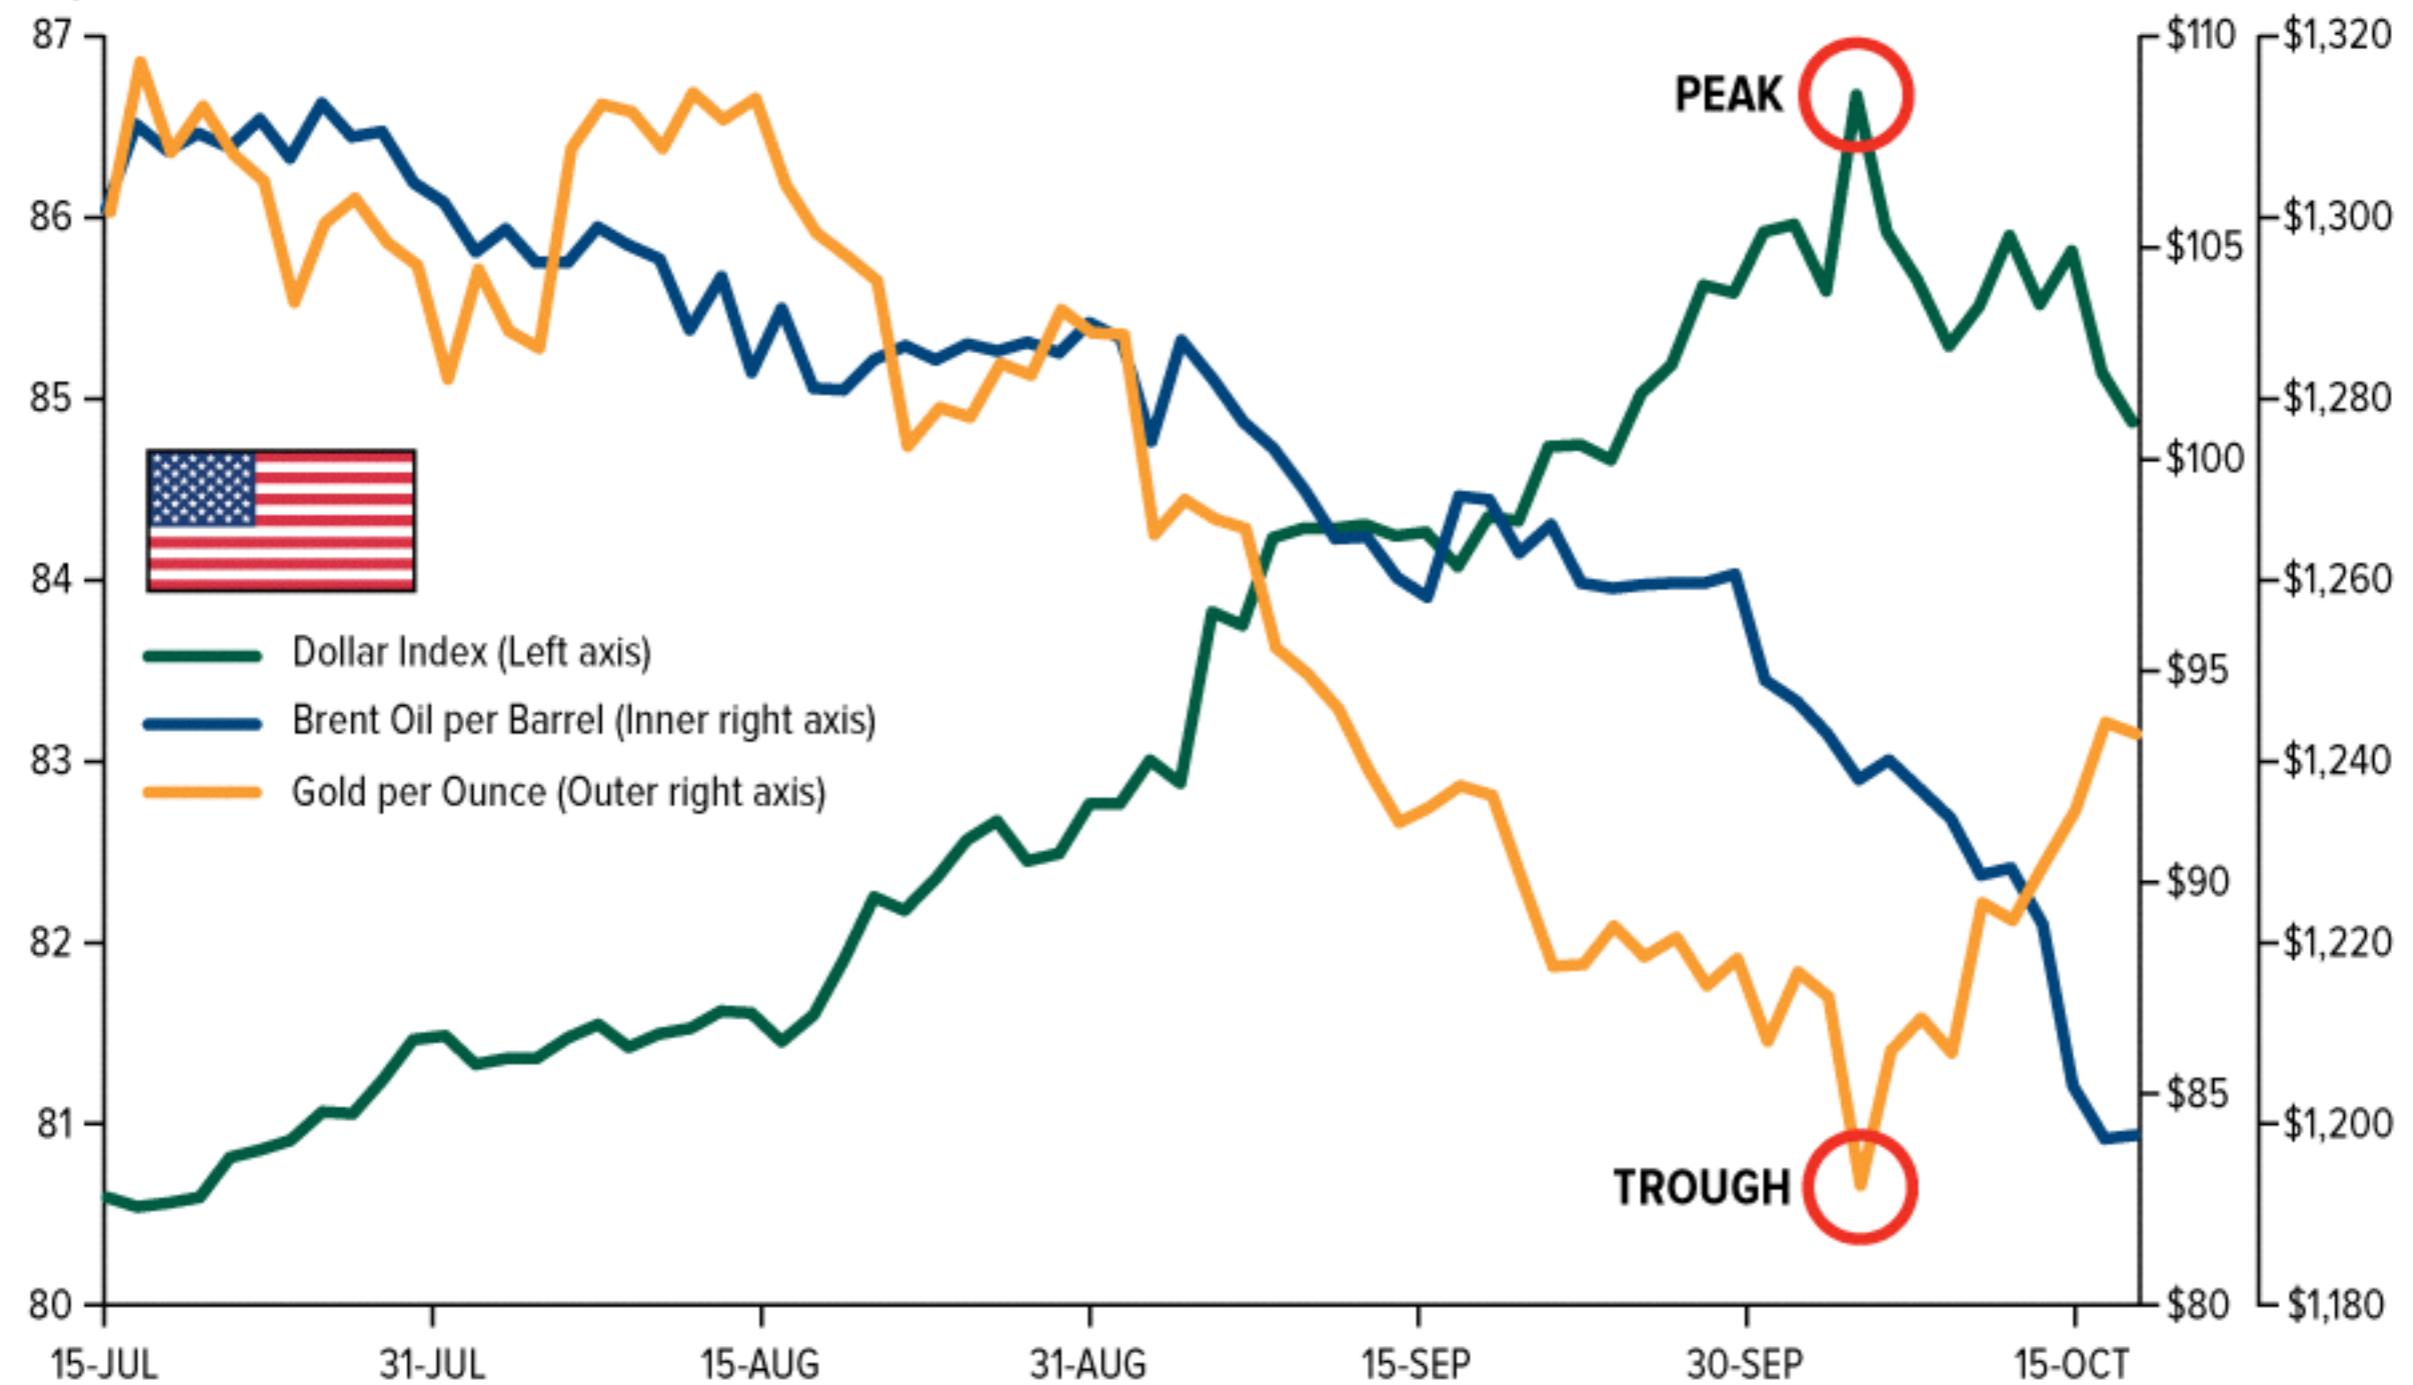

THE END OF AN ERA

- 1873 to 1914 - All major worldwide currencies were 100% backed by gold
- After WW1 ended the USA switched to Fractional Reserve Banking
 - started by printing US\$50 for every US\$20 deposited in gold
- During WW2 the USA accumulated 2/3rd's of all gold, forcing all currencies to switch to fiat-systems pegged to US\$, which was pegged to gold
- 1971 - Richard Nixon ended the gold standard, introducing **petrodollars**

GOLD Vs DOLLAR

A Strong U.S. Dollar Keeps Gold and Oil Prices Low

July 16, 2014 – October 16, 2014

WHEN YOU THINK ABOUT MONEY - IT'S HARD TO AVOID GOLD

WHEN YOU THINK ABOUT MONEY - IT'S HARD TO AVOID OIL

WHEN YOU THINK ABOUT MONEY - IT'S HARD TO AVOID OIL

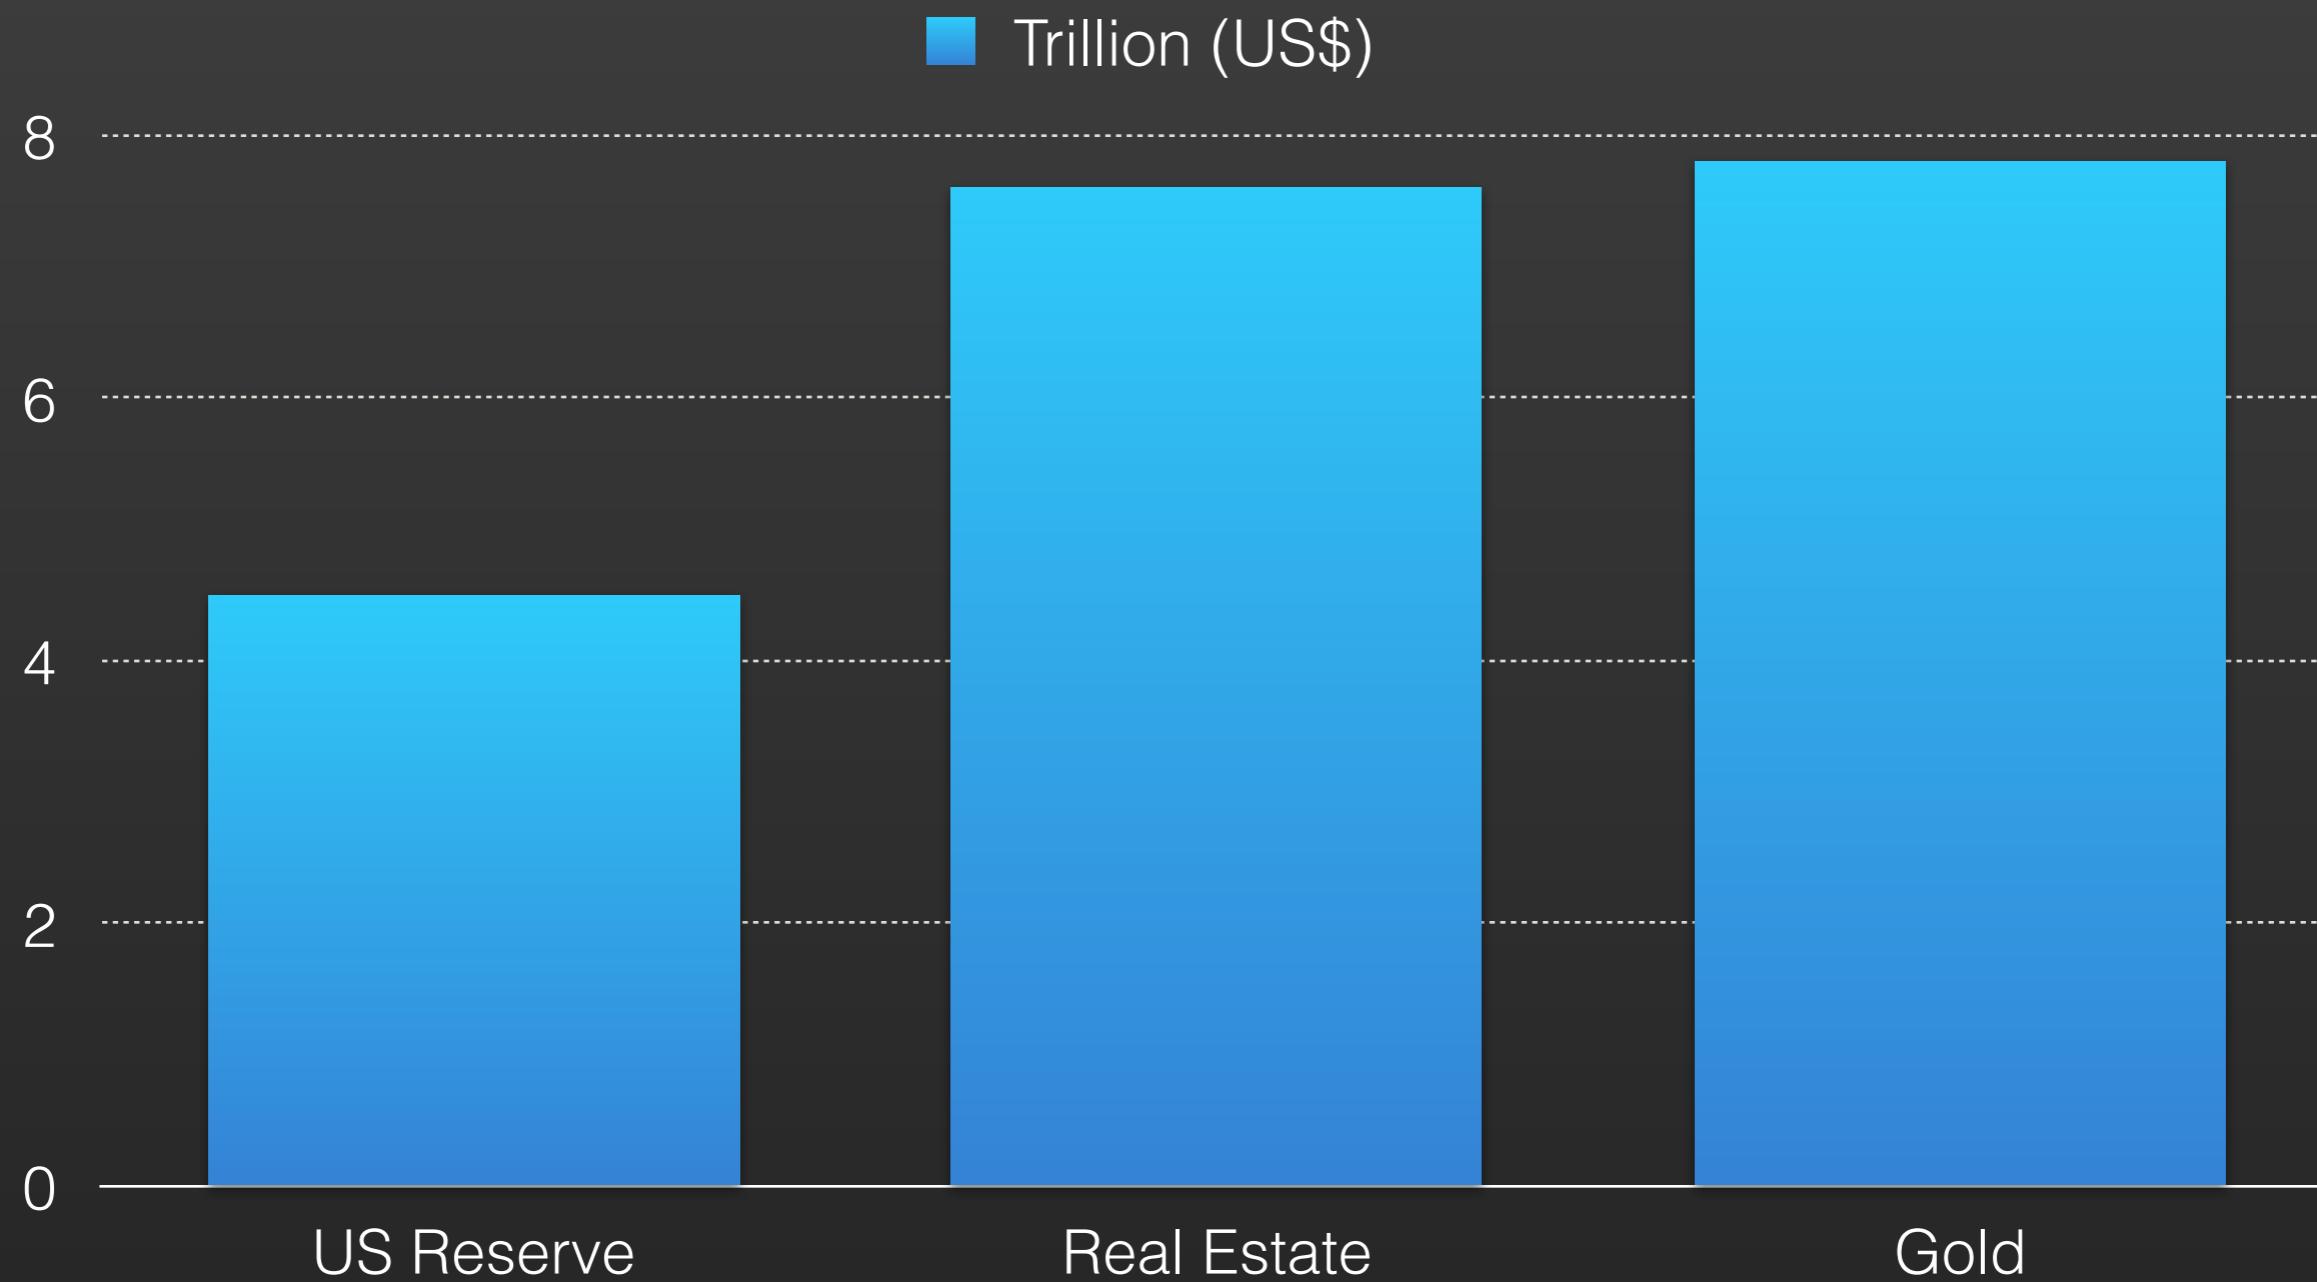

WHEN YOU THINK ABOUT MONEY - IT'S HARD TO AVOID POLITICS

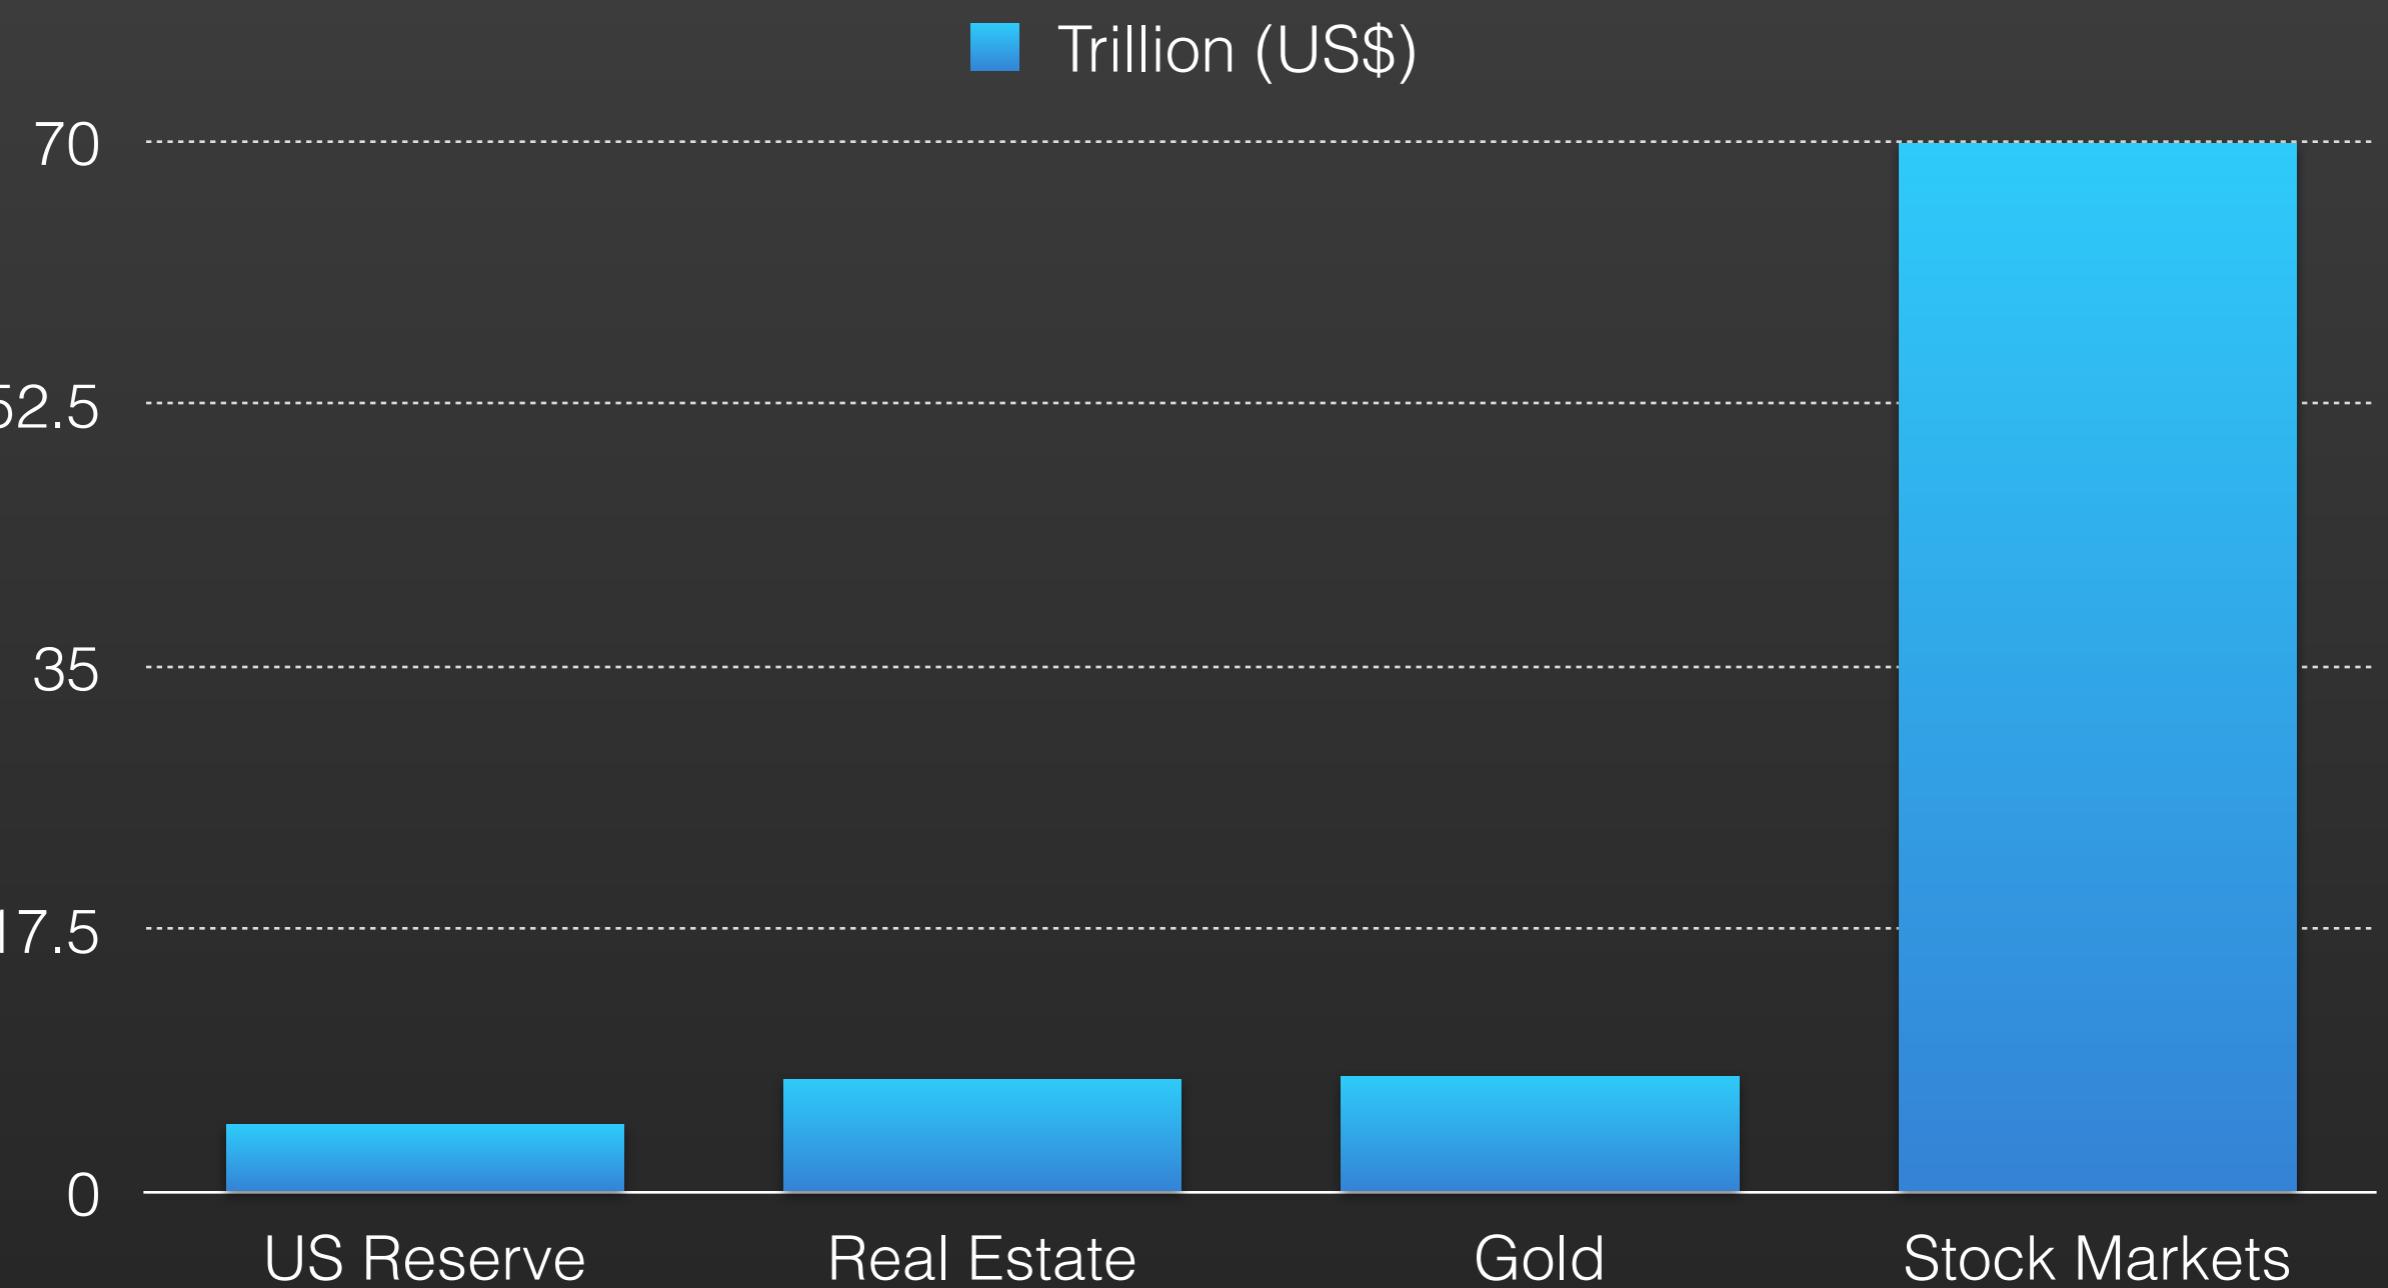

WHEN YOU THINK ABOUT MONEY - IT'S HARD TO AVOID **RELIGION**

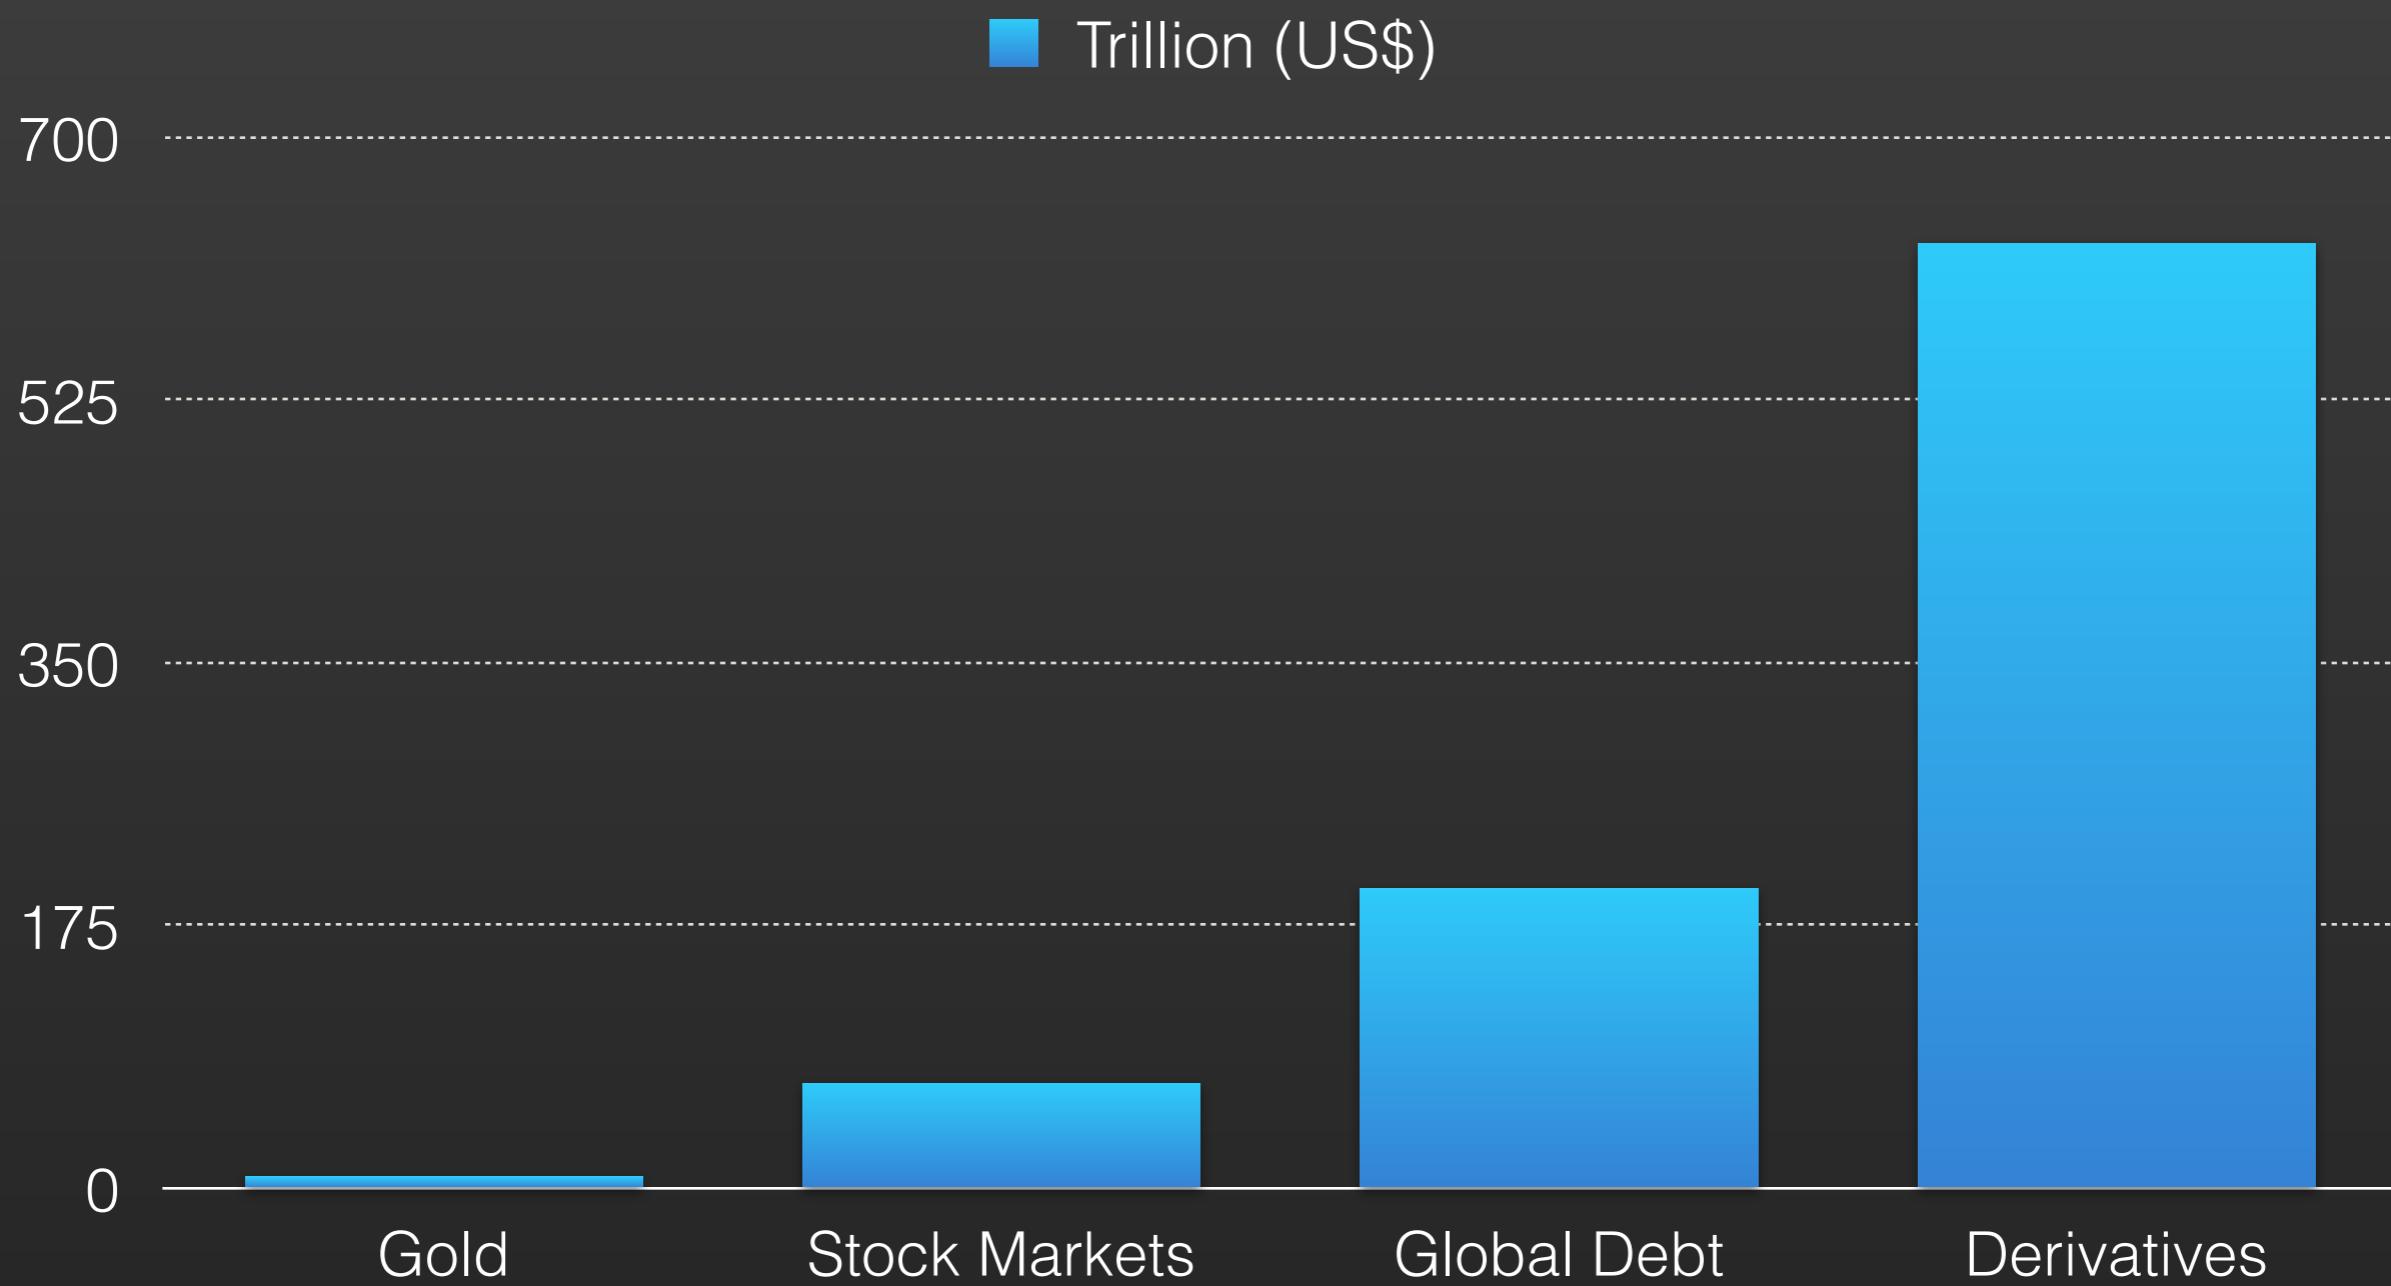

BEFORE THE GOVERNMENT LOST CONTROL - REAL MONEY

THEN CAME WALL STREET

THEN CAME THE INVENTION OF ~~MONEY~~ DEBT

IT ALL ENDS IN TEARS (512 US BANKS CLOSED SINCE 2008)

World War 2
US\$3 Trillion

2008 Bailout
US\$8.5 Trillion

All other US
Wars Ever

NOTHING LASTS FOREVER

- Average lifespan of individual currencies is 27 years
- Every 30 or 40 years the reigning monetary system fails
- Over 3,800 fiat currencies worldwide have failed
- 15 of which happened in just the past 25 years

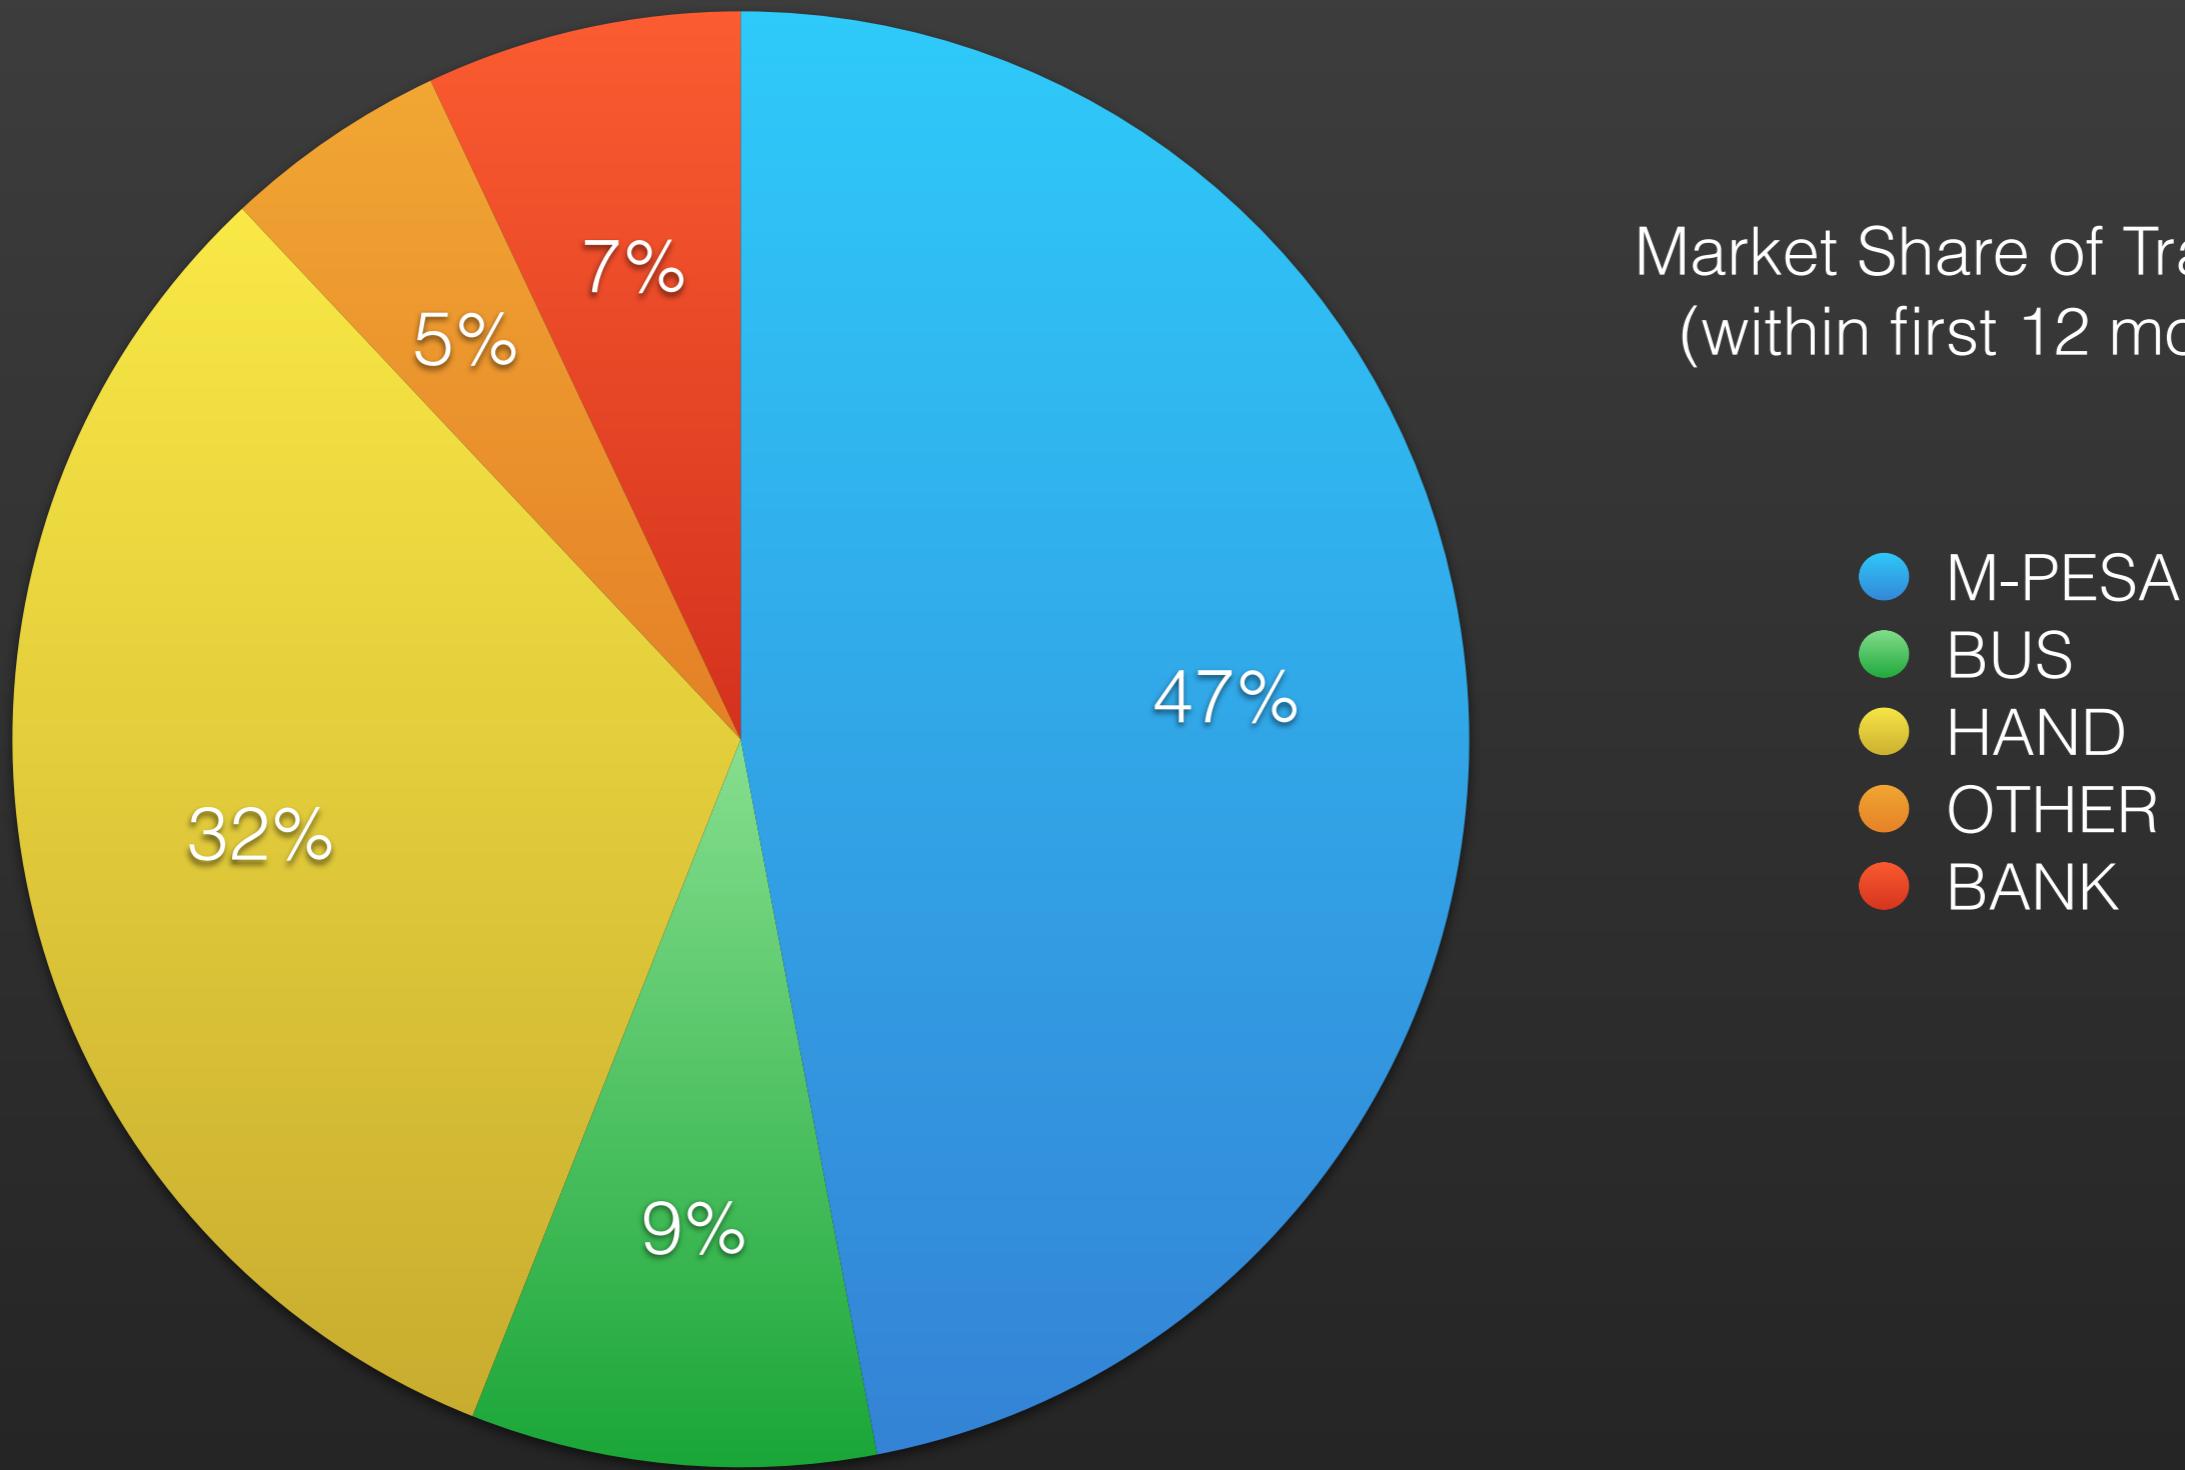

THE RECENT FAILURE OF FIAT

COUNTRY	YEAR	PROBLEM
Angola	1991-1999	1 New Kwanza = 1,000,000,000
Belarus	1994-2002	50,000 = 100,000,000 2000 Rublei
Bosnia	1993	Massive hyperinflation
Ecuador	2000	Pegged to USD after 70-80% drop in its dollar
Georgia	1995	1 new lari = 1,000,000 laris
Krajina	1993	Country folded became part of Croatia
Mexico	1993-1994	Defaulted in 1982 1 Nuevo Peso = 1,000 Old Pesos
Poland	1990-1993	1 new Zloty = 10,000 old Zlotych
Romania	2000-2005	1 new Leu = 10,000 old Lei
Russia	1992-1994	100 Rubels = 1 US\$ in 1991 30,000 Rubels = 1 US\$ in 1999
Turkey	1990-2005	1 New Turkish Lira = 1,000,000 Old Lira
Ukraine	1993-1995	1 Hryvnya = 100,000 Karbovantsivi
Zimbabwe	1999 – 2010	Ongoing mess

TECHNOLOGY ALWAYS FINDS A WAY SAVED ZIMBABWE

ARE BANKS HAVING THEIR ~~KENYAN~~ KODAK MOMENT?

- Founded in 1892
- 90% of film sales in 1976
- 85% of camera sales in 1976
- 4th biggest global brand in 1996
- Removed from S&P 500 in 2010
- Bankrupt in 2012
- **They built 1st digital camera in 1975**

“ SOFTWARE IS EATING THE WORLD ” - Marc Andreessen

U B E R

- Uber is the world's largest taxi company, but owns no cars
- AirBnB is the largest accommodation provider, but owns no real estate
- Facebook is the most popular media provider, but creates no content
- Alibaba is the most valuable retailer, but owns no inventory
- **Bitcoin is the most valuable digital currency, but there are no coins**

VS

PRIVATE CHAINS

WHAT ARE THE BENEFITS OF DISTRIBUTED PUBLIC LEDGERS?

- They provide an immutable tamper-proof audit-trail of the truth
- Data can be easily shared and independently verified by third-parties
- Vastly increased security that is much less vulnerable to attack or outage
- Programmable contracts that can radically reduce human errors and costs

“While Fintech Disrupts Banks,
the Blockchains Disrupt Fintech”

WHAT ARE THE BENEFITS OF DISTRIBUTED **PUBLIC** LEDGERS?

- They provide an immutable tamper-proof audit-trail of the truth
- Data can be easily shared and independently verified by third-parties
- Vastly increased security that is much less vulnerable to attack or outage
- Programmable contracts that can radically reduce human errors and costs

“83% of banks believe they will lose 24% of their revenue to FinTech within 5 Years”

INTERESTING BITCOIN BLOCKCHAIN FACTS TO REMEMBER

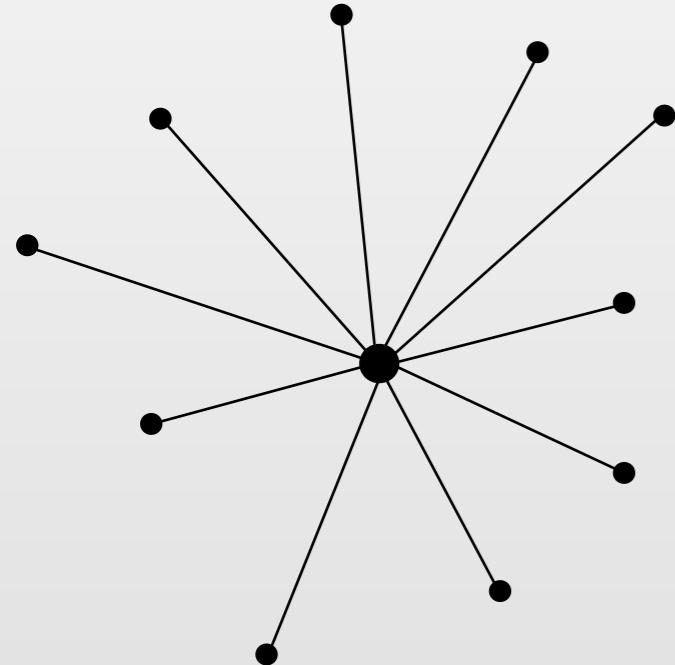

- Bitcoin blockchain released in January 2009 by Satoshi Nakamoto
- We do not know who Satoshi is, or what their religion or political views are
- However, the bailout of 2008 was cited as primary catalyst for its creation
- US\$13 per coin in 2013 (which is when we bought) - now US\$540 per coin
- The Bitcoin network is currently processing over 200,000 daily transactions
- The network's market capitalization is currently around US\$7 billion
- 21 million maximum finite supply, decreasingly dispersed every 10 minutes
- **But most importantly of all is the technology behind it...**

BITCOIN AND BLOCKCHAINS HAVE NO NEW TECHNOLOGY

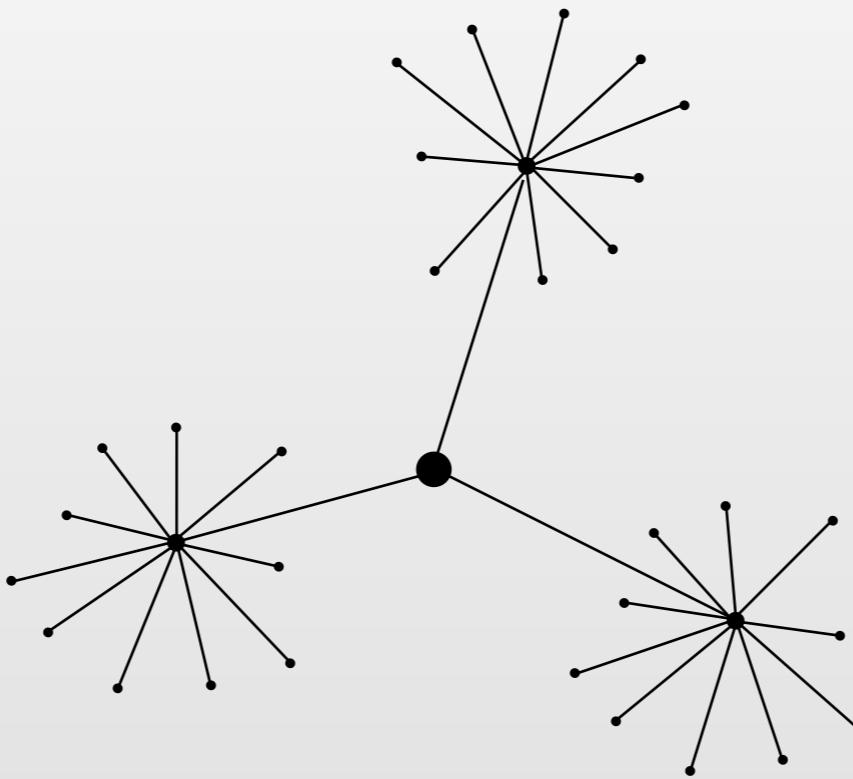

- HASH - Theorized in the 1800s - Coined by IBM in the 1950s
- SHA - Encryption method first introduced by US Navy in 1993
- P2P - Peer to peer protocol popularized by Napster in 1999

DISTRIBUTION
BLOCKCHAINS

BLOCKCHAINS ARE SIMPLY A NETWORK OF NODES

- Each member of the network runs their own node and all nodes are equal
- The blockchain becomes more secure as more nodes join the network
- All transactions across the entire network are tracked by each node
- **There are no actual coins** - there is only a ledger of who owns what
- Cryptographic key-pairs represent accounts and passwords
- On the blockchain - no one knows you're a fridge

EVERY ACCOUNT IS MERELY A SET OF KEYS

EACH “ADDRESS” REQUIRES A PRIVATE KEY TO ACCESS IT

SOME ADDRESSES EVEN REQUIRE MULTIPLE KEYS

WHAT'S IN A BITCOIN TRANSACTION?

- Multiple unspent inputs are used in order to form the total value sent
- Cannot send proportions of inputs, must use all and send the change back
- Because a single transaction can send multiple values to multiple outputs
- Fees are based upon the total size (inputs and outputs) rather than value
- Paying these fees is done by forgetting to send some value to someone
- Transaction scripts can contain complex variables (multi-sig & timed locks)

ALICE CAN'T SEND WHAT SHE DOESN'T HAVE AND BOB WANTS 5

PUTTING THE BLOCK INTO BLOCKCHAINS

- Transactions are batched into blocks every ten minutes (with Bitcoin)
- The block is added to the chain with a link to the previous block
- With the block added to the chain, its transactions are then confirmed
- As soon as a new block has been added linking to that original block, the transactions from the first block then have 2 confirmations
- It is recommended that large physical transactions wait for 6 confirmations
- Whereas digital downloads may require no confirmations at all

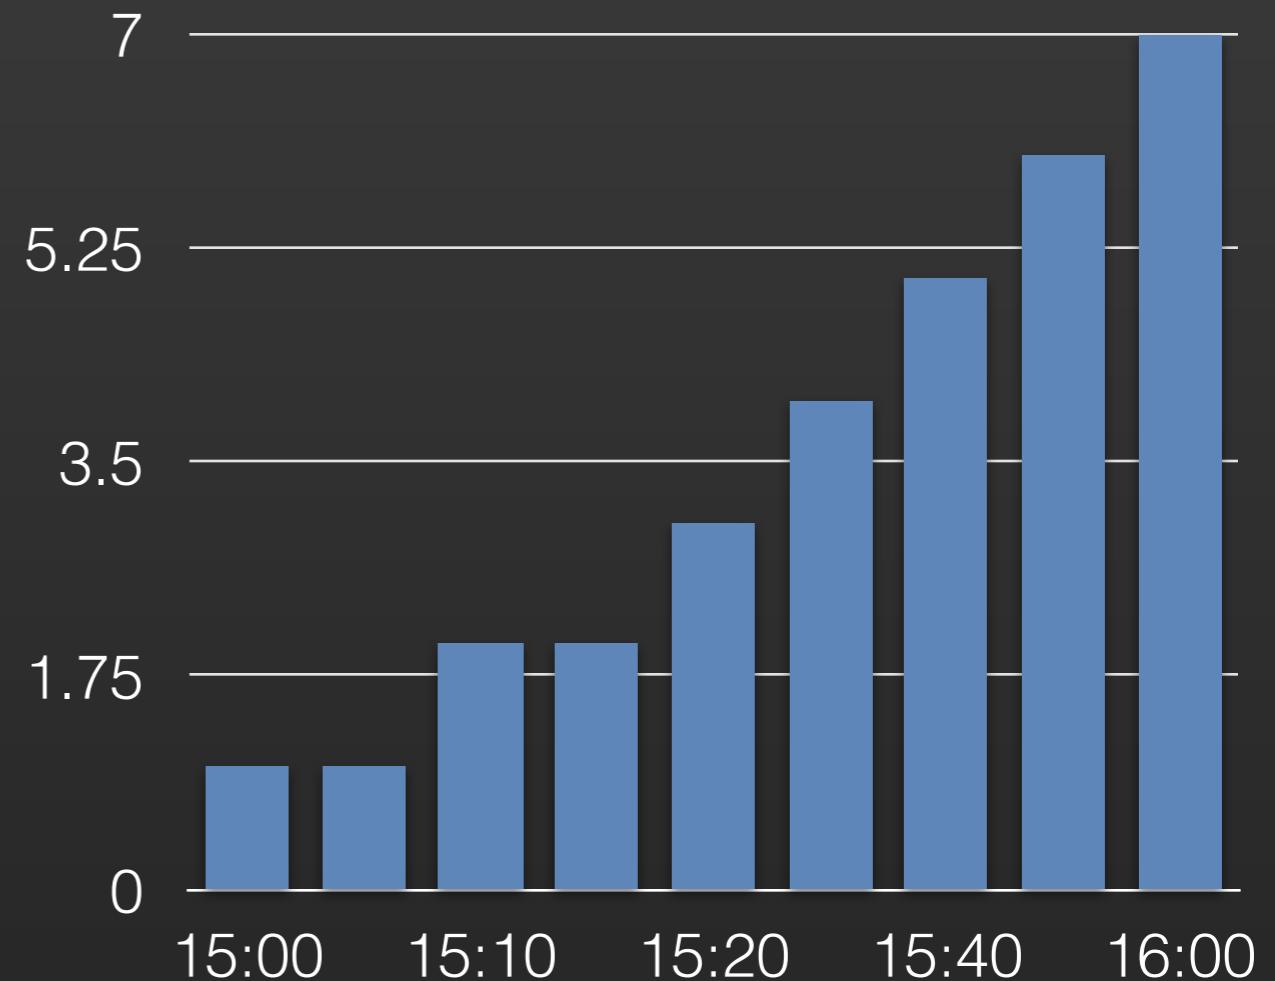

REALTIME VS TRUTH

Block Heights

Block Heights

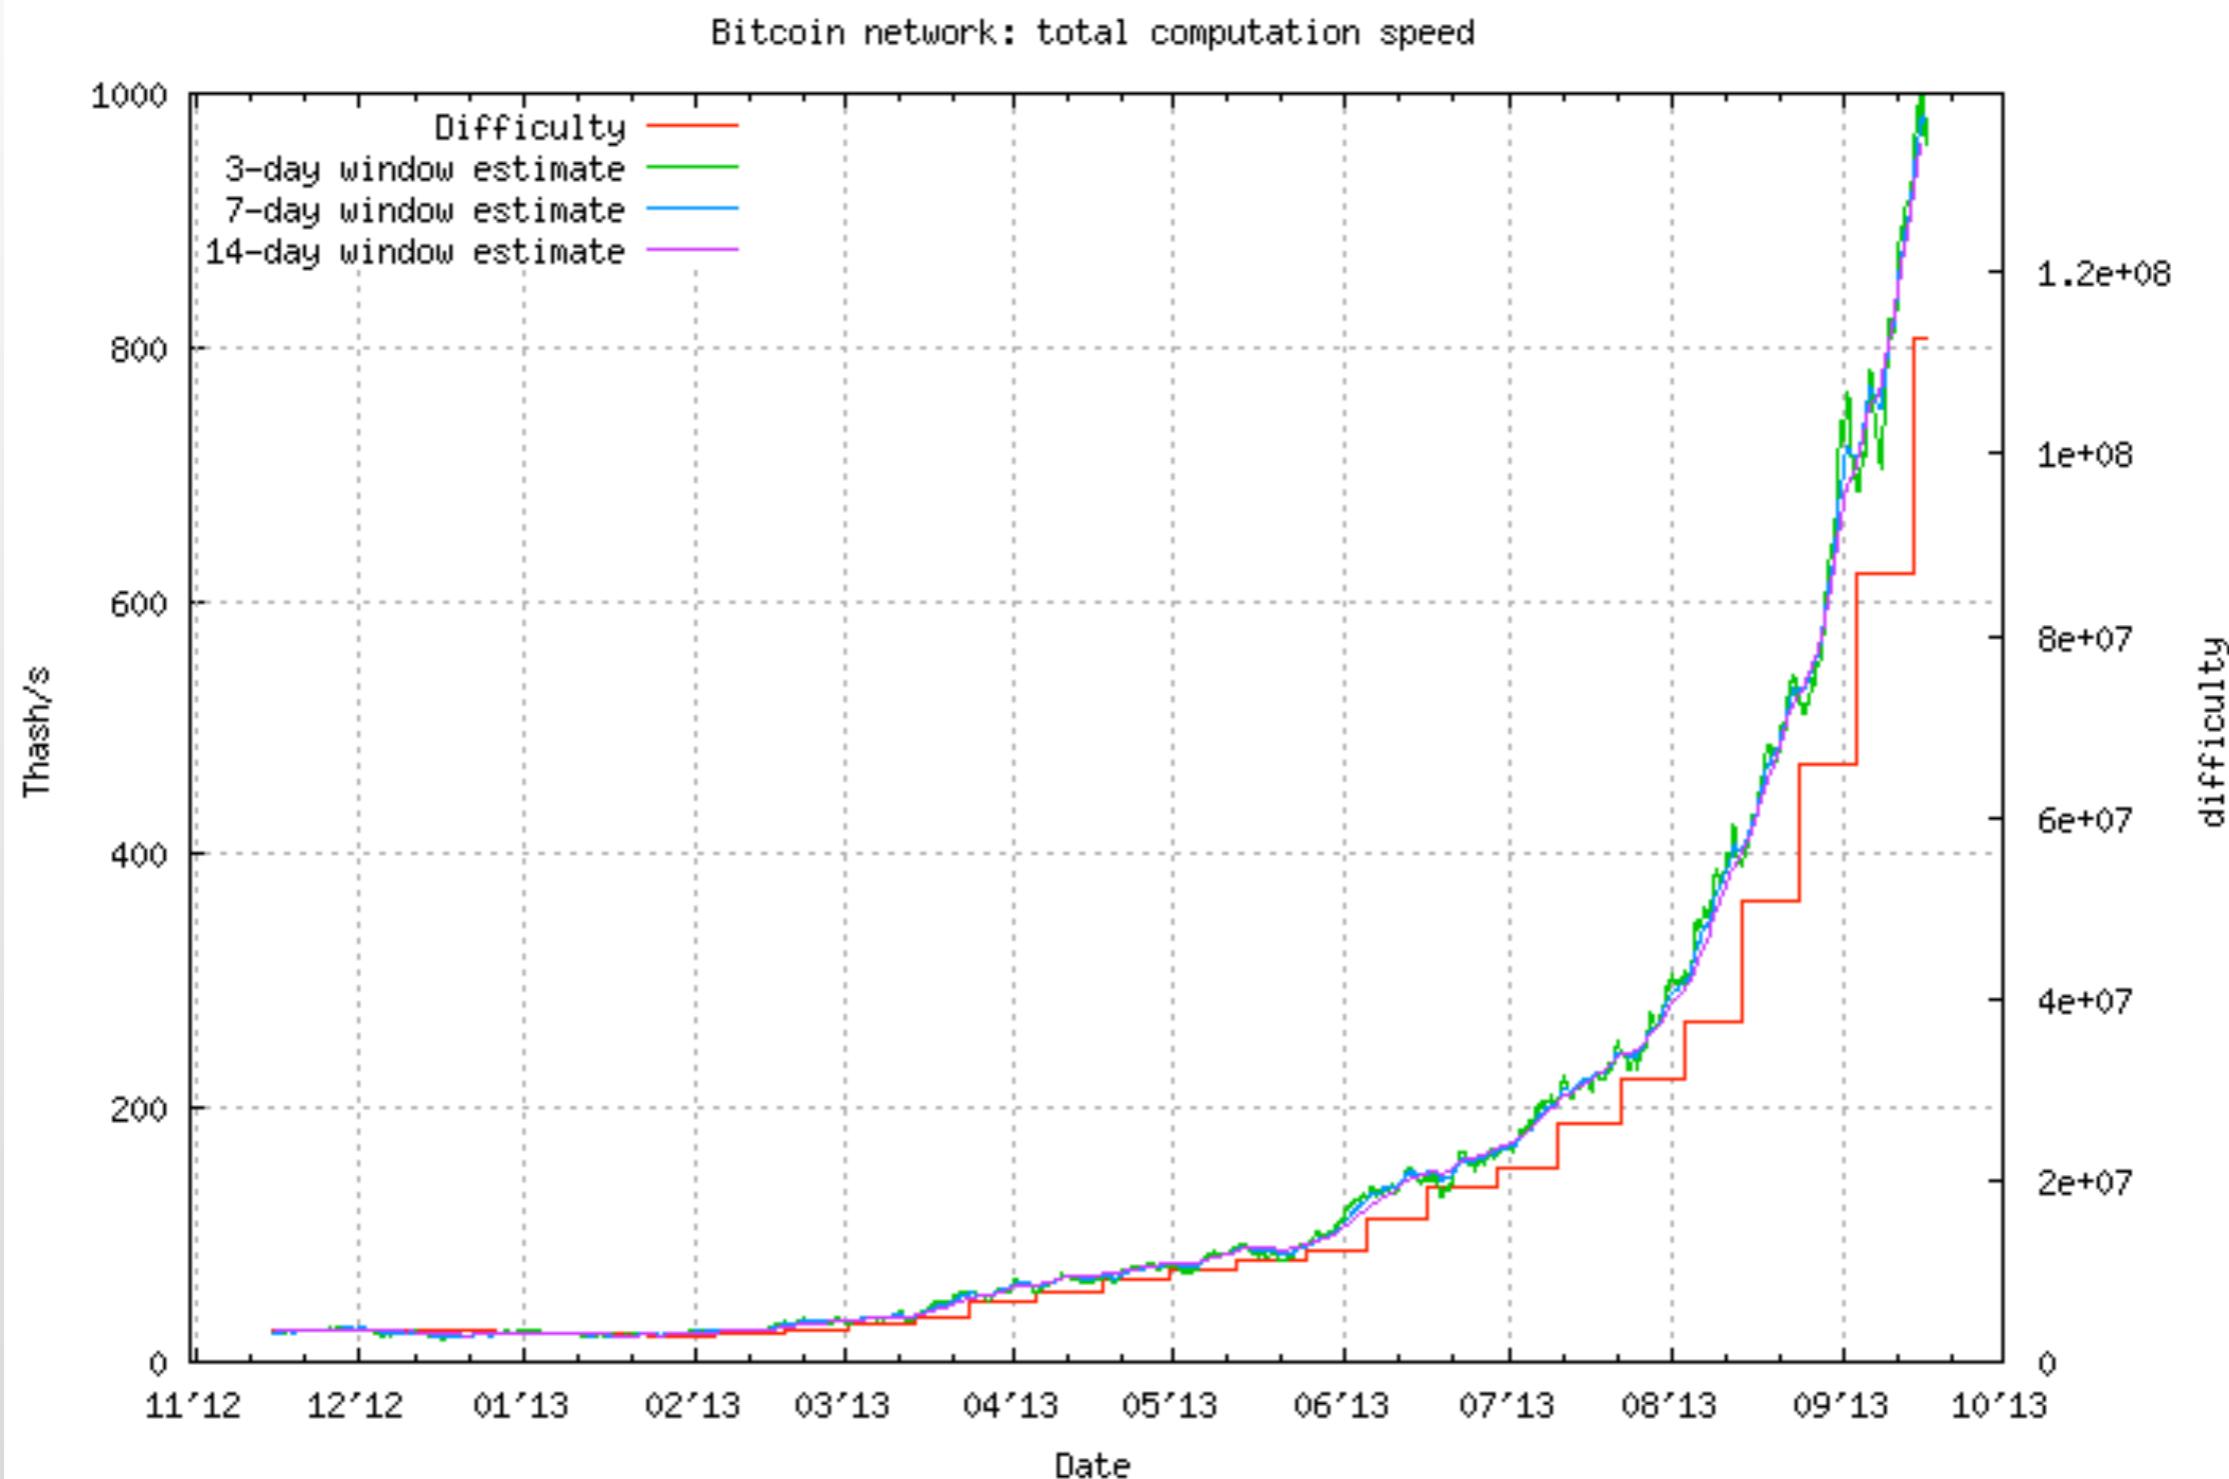

MINING FOR NUMBERS

- To reach **consensus** as to which node has the right to add the next block to the chain, miners compete in a race to solve cryptographic equations
- Miners gather and in-turn verify unconfirmed transactions into blocks
- They then add a nonce (one use number) to the block and hash it
- If the hash has X number of zeros at the beginning it becomes a valid block
- Otherwise the miners increase the nonce and they hash the block again
- Solving these cryptographic equations is becoming increasingly difficult

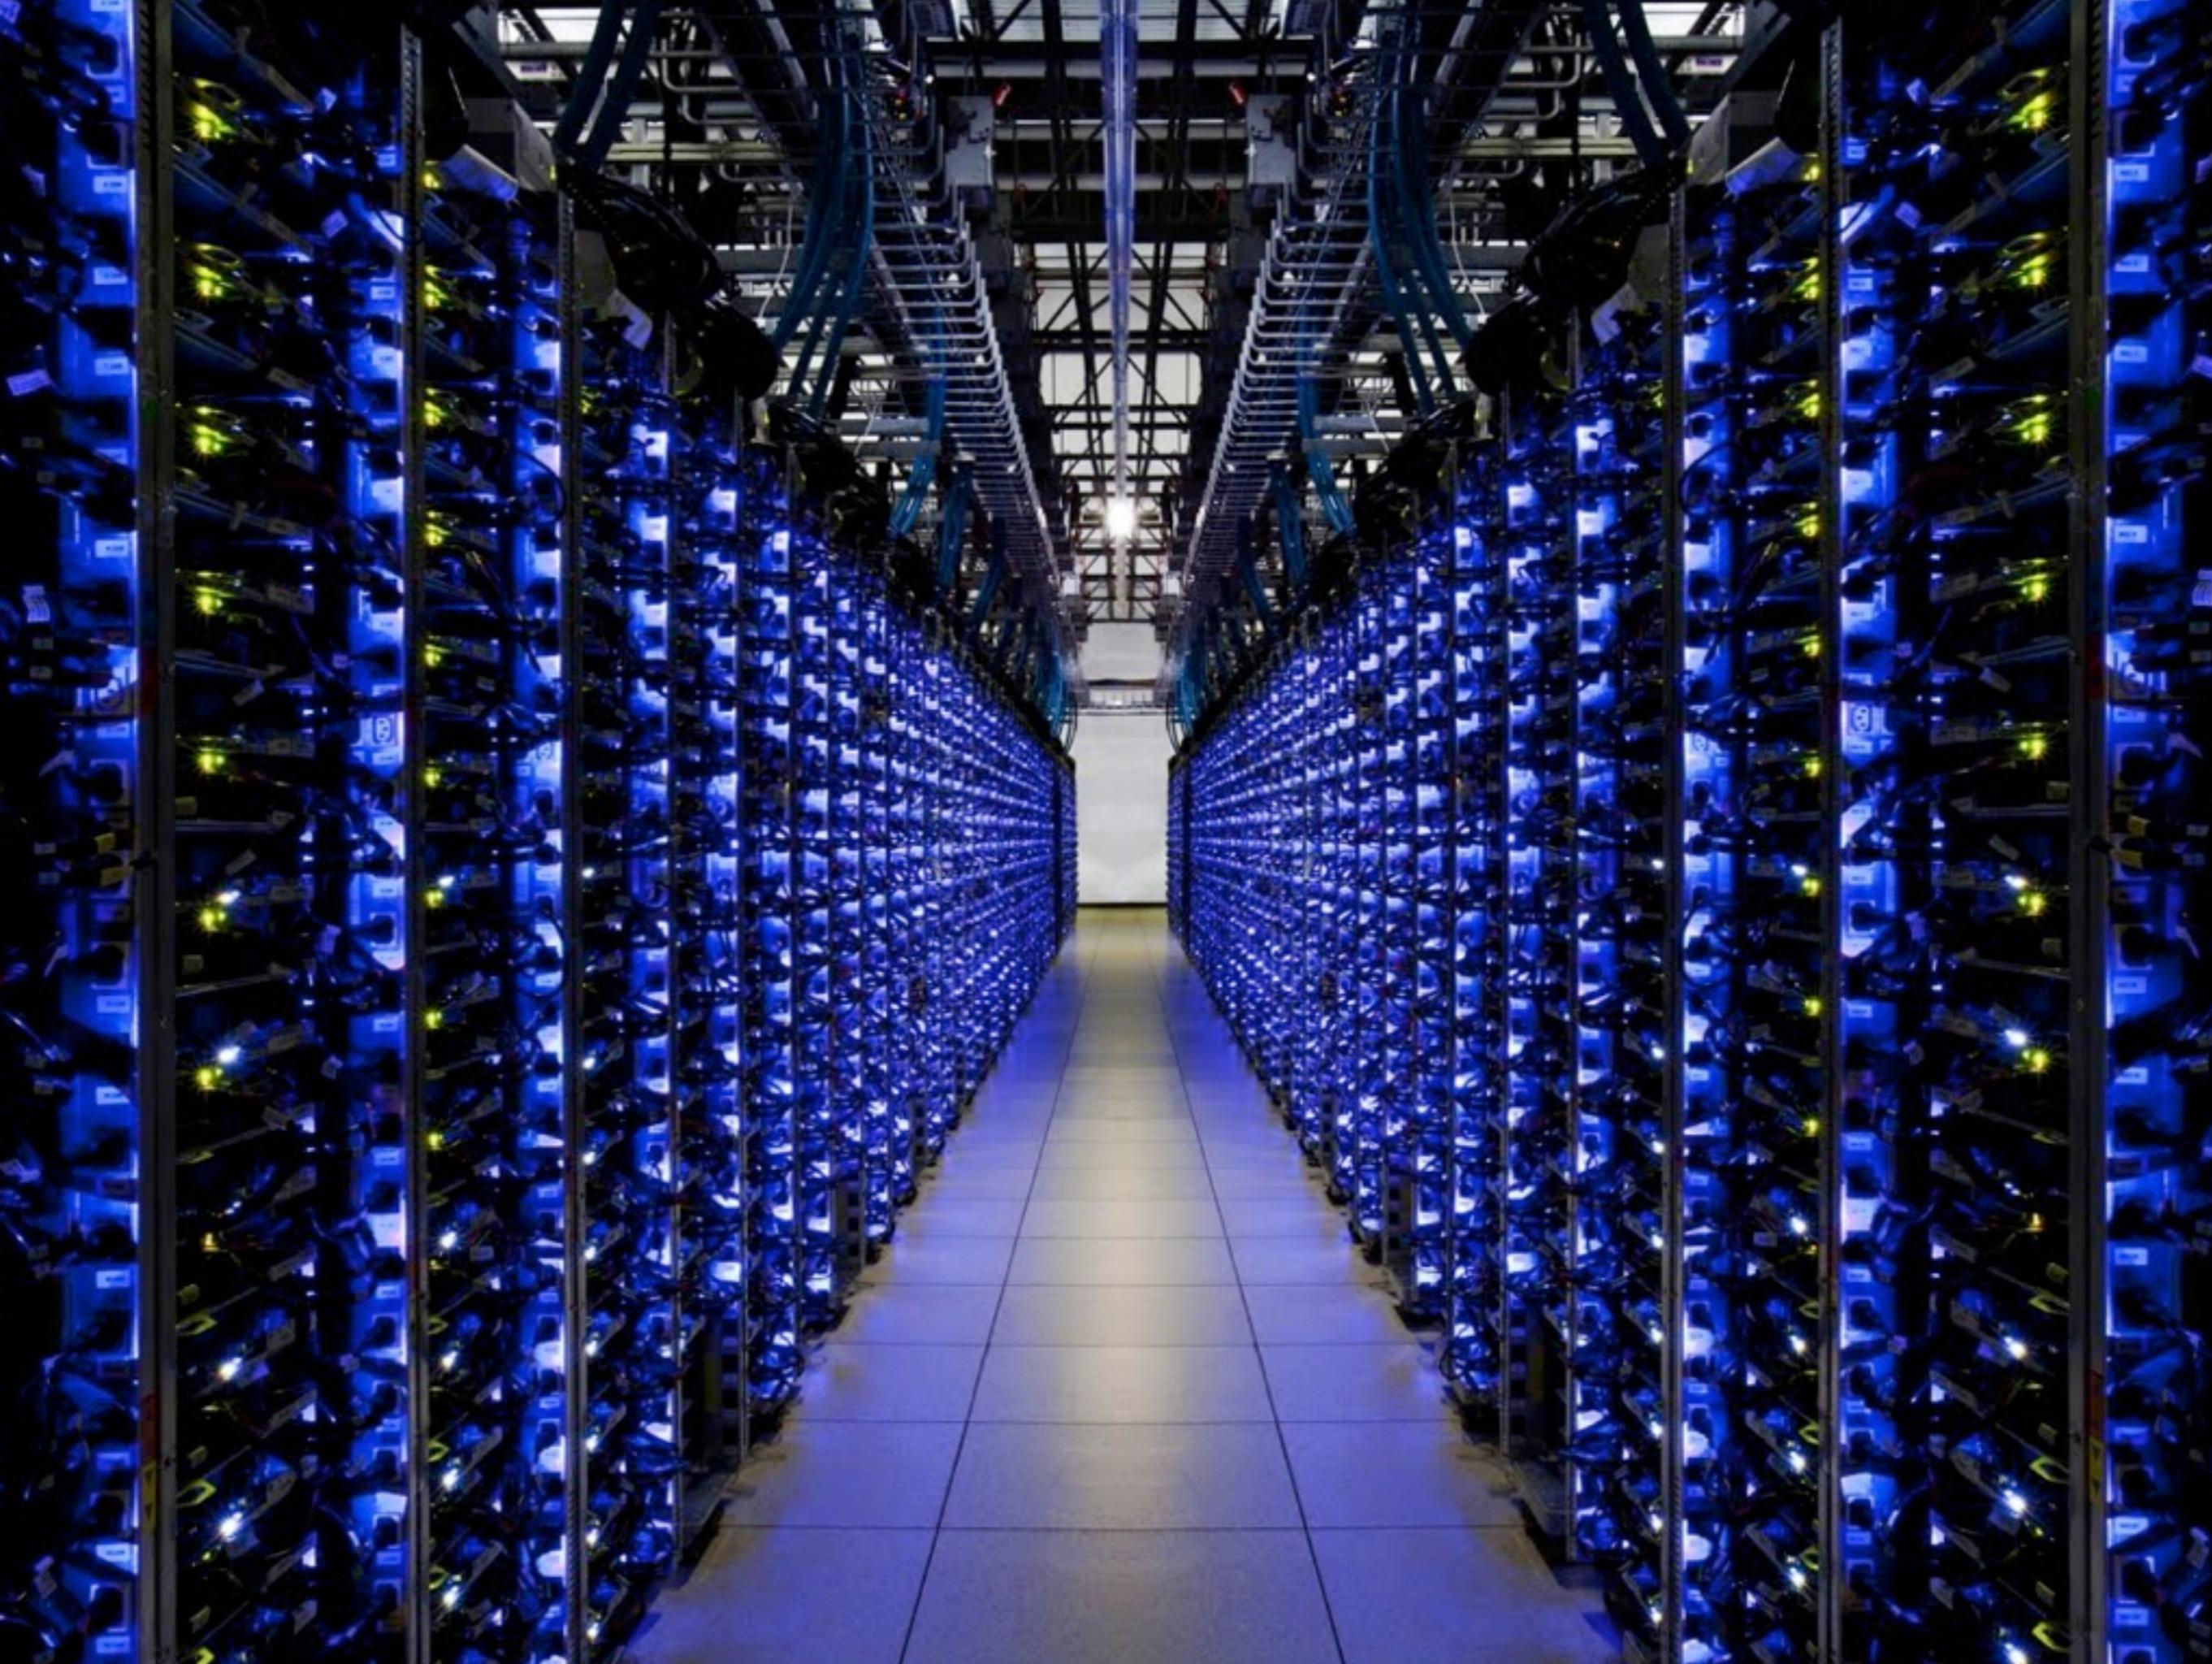

THIS IS THE HASHING POWER OF THE NETWORK IN 2013

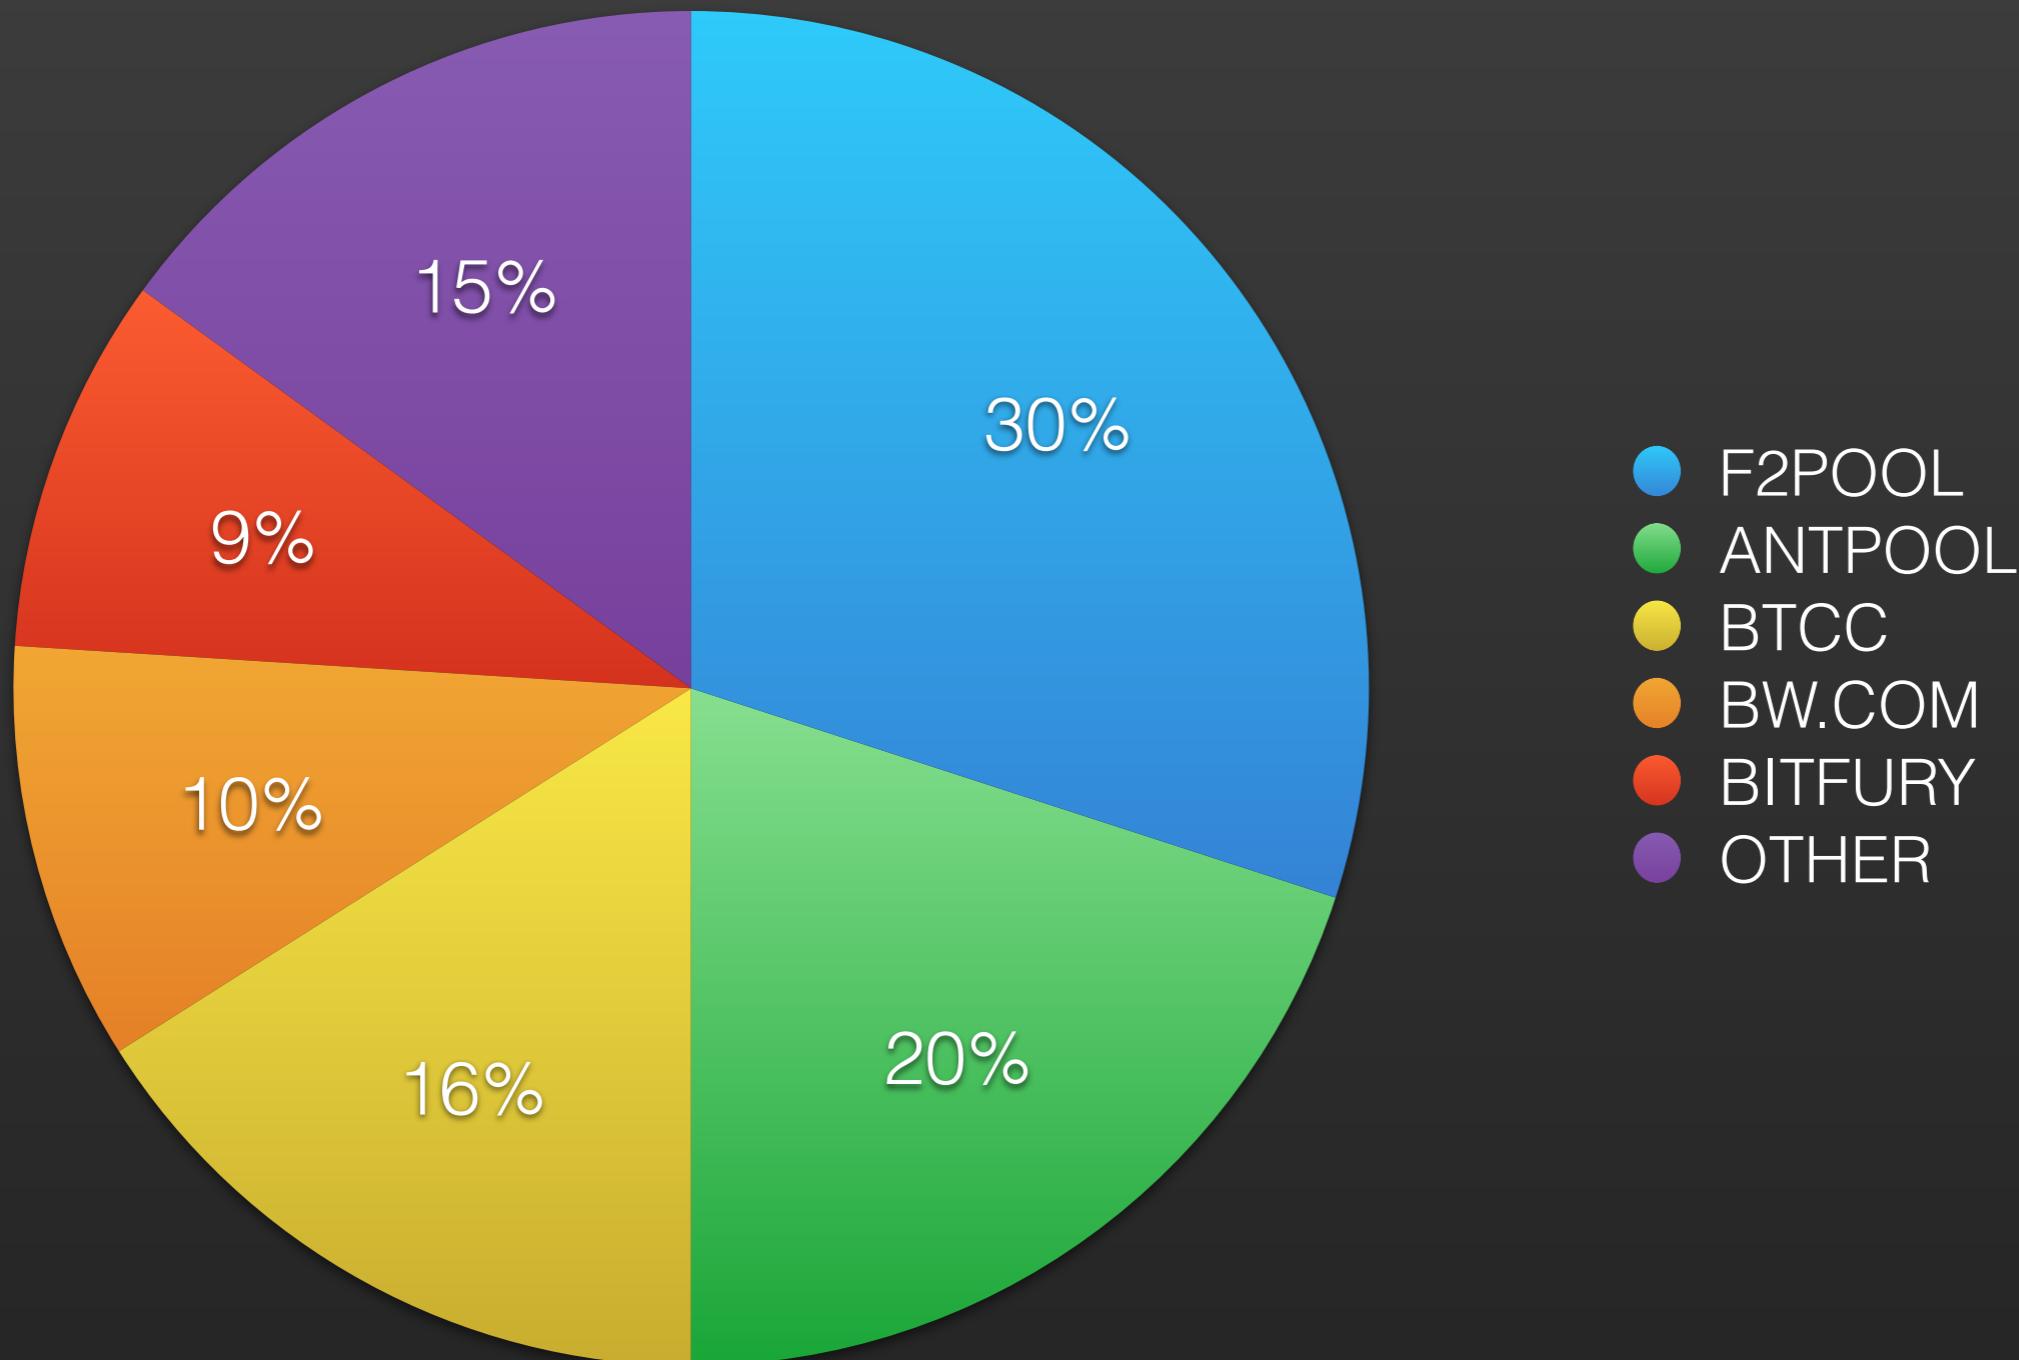

MINING IS NOW A BILLION DOLLAR BUSINESS

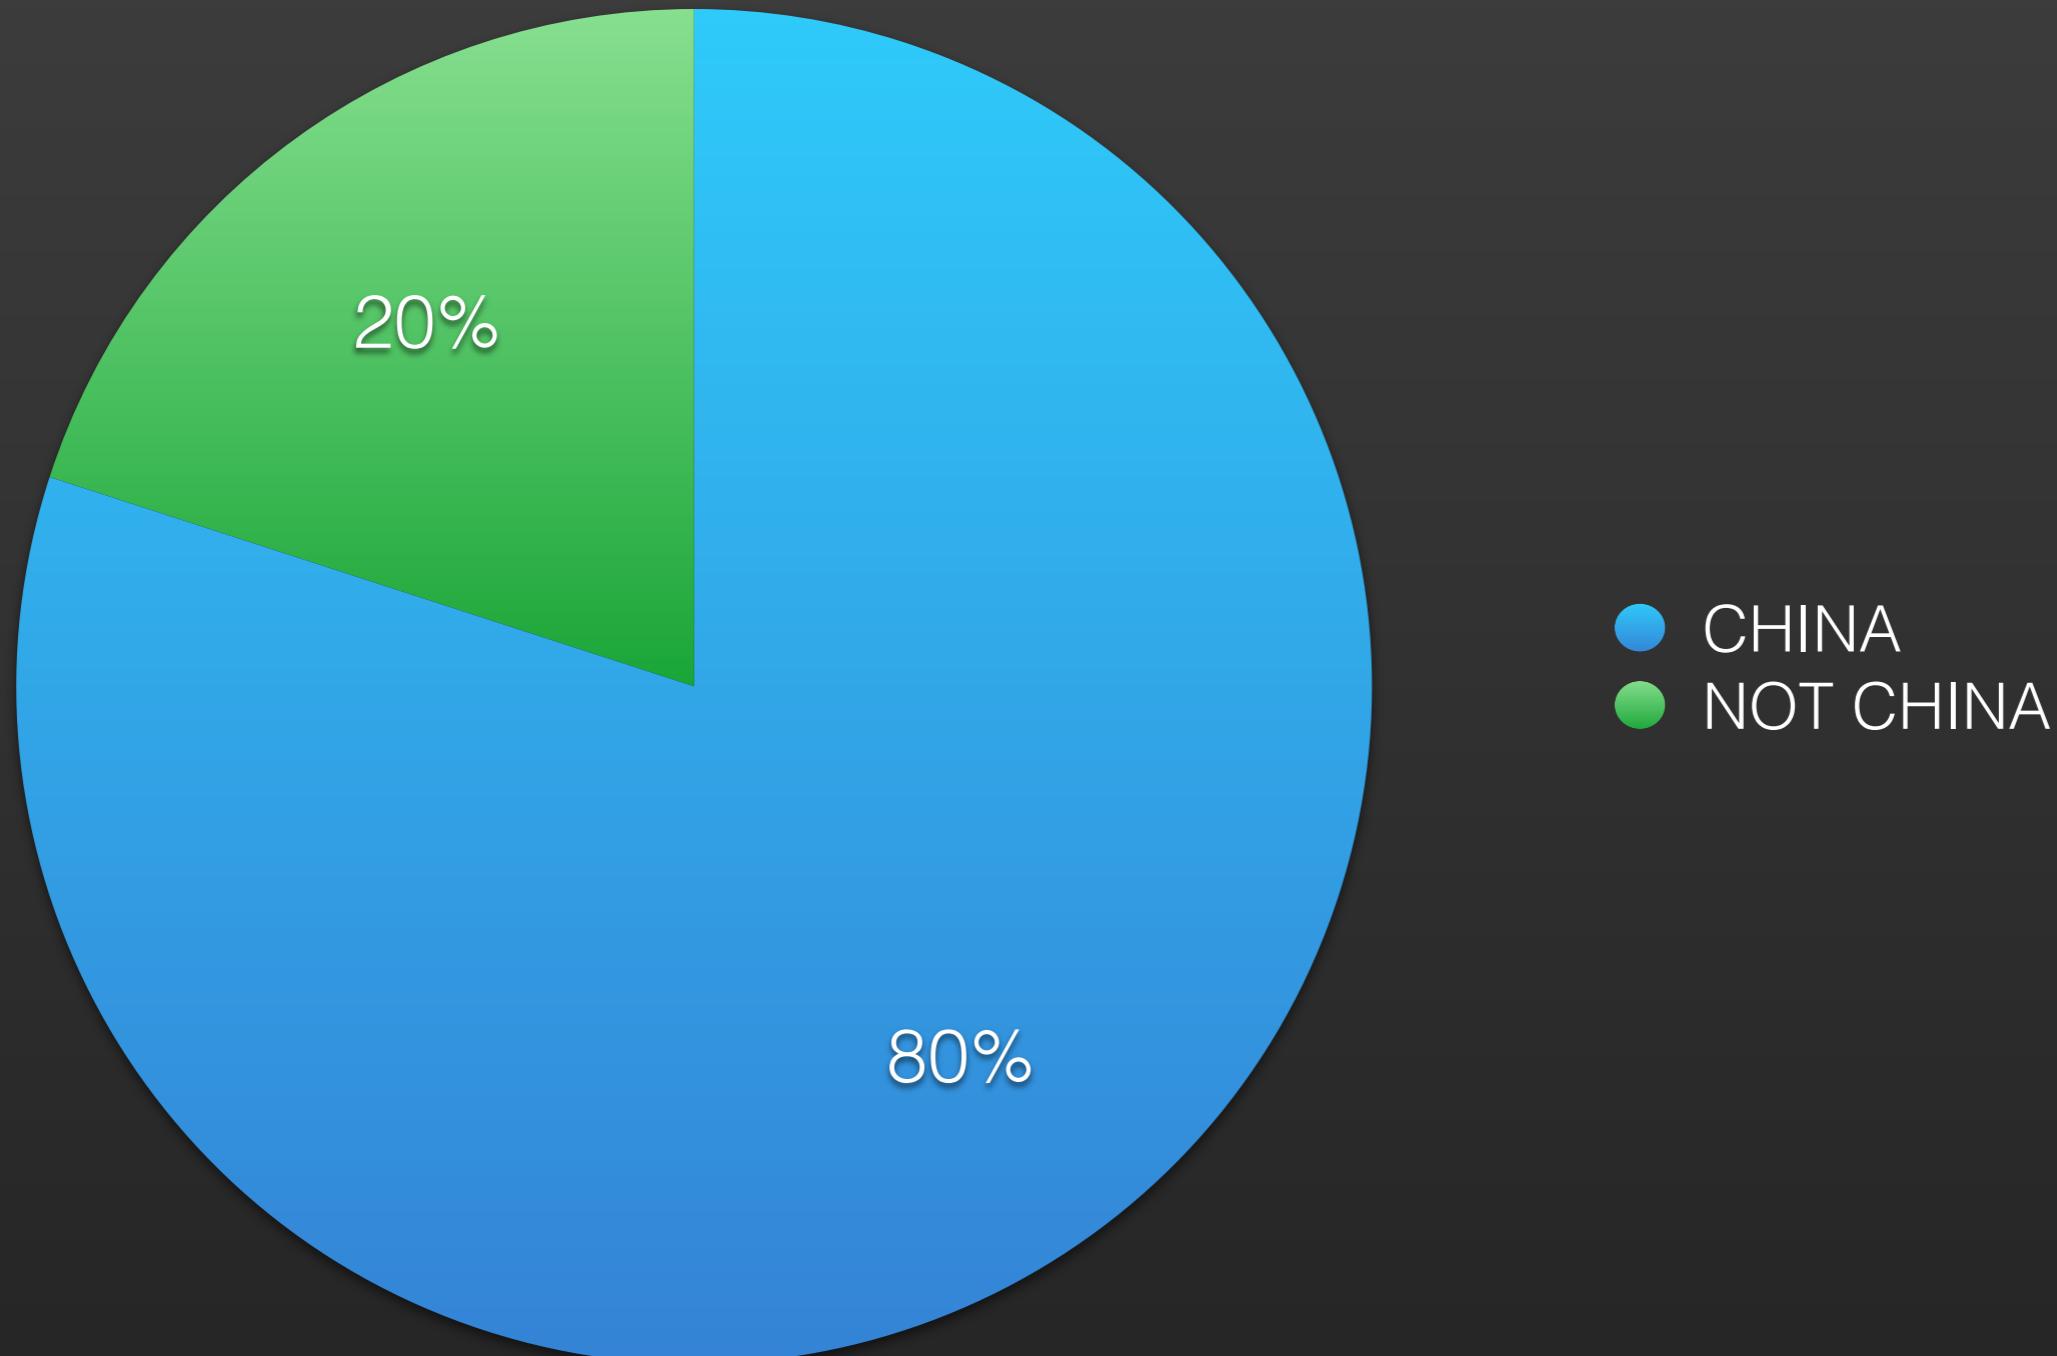

THE NOT SO DISTRIBUTED ECONOMICS OF MINING

THE EVEN LESS DISTRIBUTED ECONOMICS OF MINING

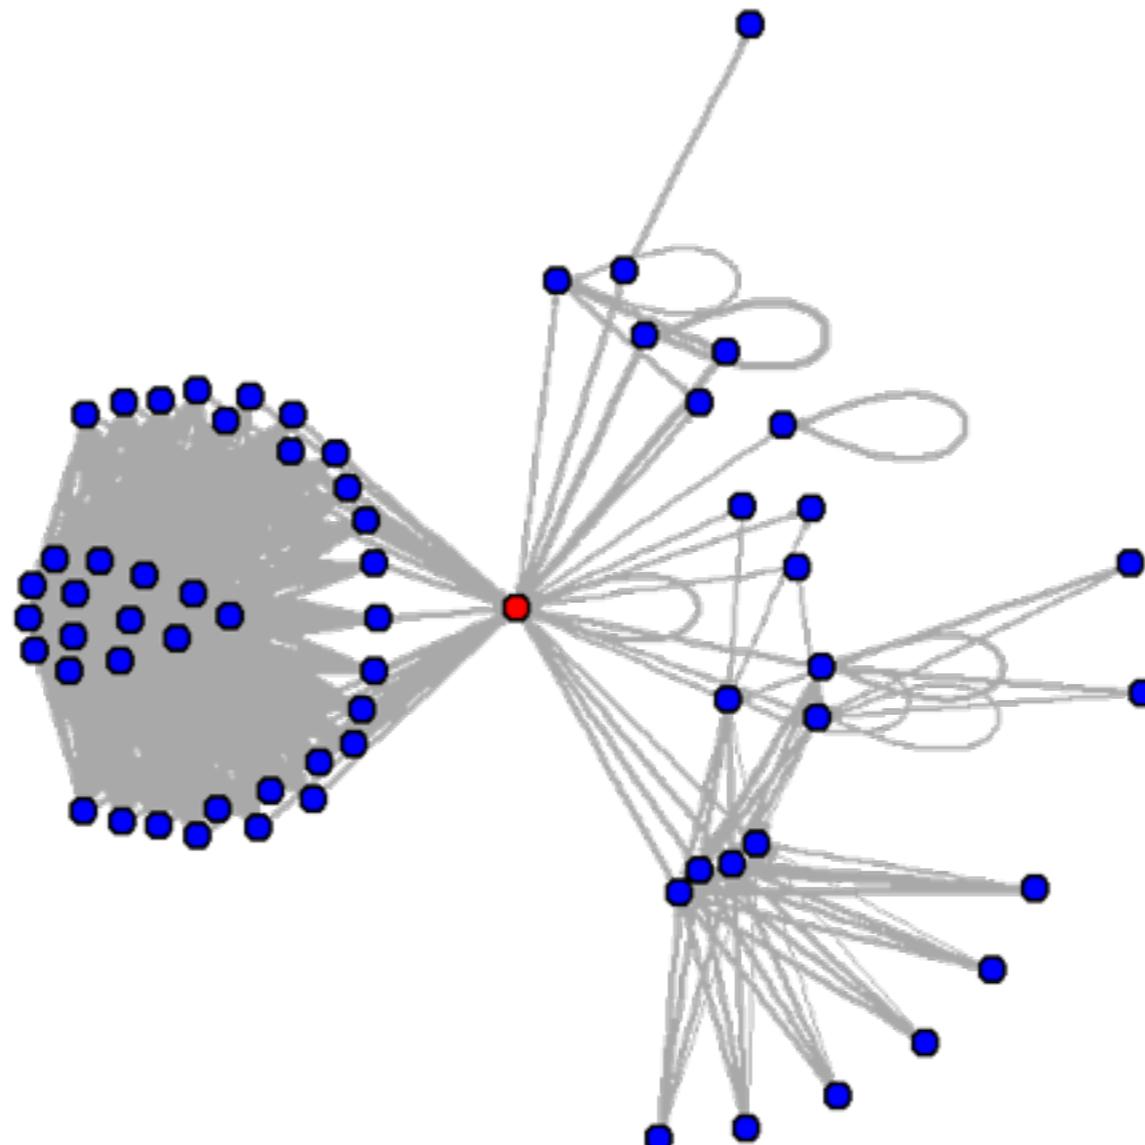

TRUST IS SOLVED VIA TRANSPARENCY - IT'S OPEN TO ALL

REGULATION - THE SIMPLE VERSION

BITCOIN IS BAD
BLOCKCHAINS ARE GOOD

REGULATION - THE COMPLEX VERSION

- Primary place for regulation is when exchanging cash for crypto-currency
- No regulation published regarding the underlying blockchain technologies
- Bank Negara have stated it is not legal tender and used at consumer's risk
- The same can be said of US Dollars, Gold, Silver, Diamonds and Plutonium
- The US court recently labelled it property in context of a divorce settlement
- In China, individuals can hold and trade Bitcoin but banks and FIs cannot
- In Germany, Bitcoin are legally binding financial instruments
- The Australian Securities Exchange have heavily invested in blockchains
- Japan have recently legalized and begun adopting at banks & exchanges

BITCOIN ISN'T EVERYTHING
BILLIONS INVESTED IN BLOCKCHAINS

BANKS ARE MOVING FAST DUE TO ECOSYSTEM MATURITY

As of January 2016, more than 60 banks and leading financial institutions have made statements confirming that they are actively working on blockchain projects.

IMITATION IS THE BEST FORM OF FLATTERY

- 1st Generation of Alt-Coins forked each other with minor tweaks
- Basic breakout alt-coin successes included Litecoin and Dogecoin
- Dash (previously known as DarkCoin) worth noting due to governance
- See the Malaysian-Based **CoinGecko** for a better list!

BLOCKCHAIN 2.0 - BUILT FROM SCRATCH

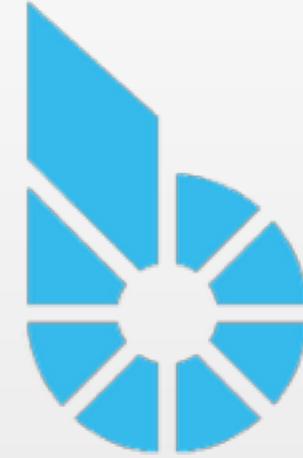

RIPPLE*

NXT GENERATION
OF CRYPTOCURRENCY

NXT

BITSHARES

- Ripple has most interest from banks due to their pre-mined walled-garden
- NXT is the most realized (fully-featured) of all the ambitious projects
- Bitshares coined the phrase DACs (distributed autonomous corporations)
- We now have a blockchain for everything from songs to logistics & coffee

* Not an actual blockchain

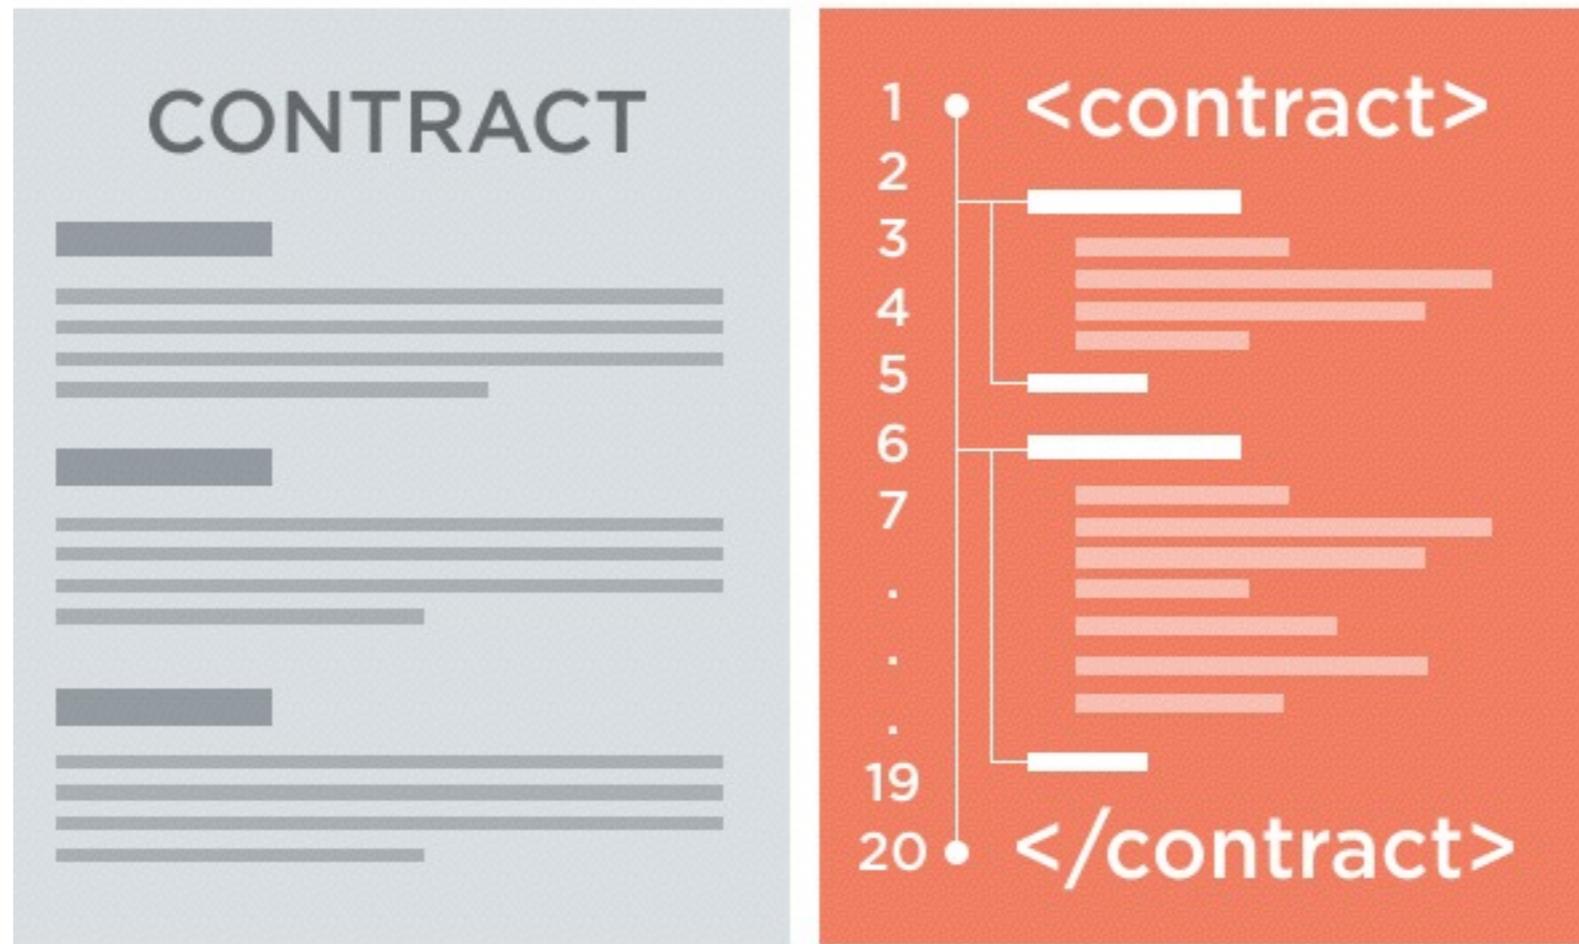

ETHEREUM TAKES THINGS ONE STEP FURTHER

THE WORLD'S SUPER COMPUTER...?

- Raised US\$15 Million in crowd-funding when launching their Ether currency
- Aiming to be the first turing complete blockchain, they have almost achieved it
- Heavily supported by Microsoft & also being used by IBM for their IoT platform
- Recently raised US\$150 Million in crowd-funding their own venture fund
- However, the more moving parts a system has - the more likely it is to break

SMART CONTRACTS ARE EVERYWHERE

- Even Bitcoin utilizes basic smart contracts (with over 100 script functions)
- Smart contracts are snippets of code stored and executed by the network
- They can perform transactional based events if defined conditions are met

WHAT'S REALLY IN A TRANSACTION?

```

DECODING SCRIPT HEXES

- 80% of transactions are known as **standard transactions**
 - OP_DUP OP_HASH160 <pubKeyHash> OP_EQUALVERIFY OP_CHECKSIG
- Approximately 1% of transactions contain **OP>Returns**
 - OP_RETURN <hexedData> - can you find Gandhi?
- There are even a few hidden puzzles on the blockchain...

OP_HASH256

6fe28c0ab6f1b372c1a6a246ae63f74f931e8365e15a089c68d6190000000000

OP_EQUAL

ETHEREUM TAKES THINGS ONE STEP FURTHER

```
contract MyToken {  
  
    /* Public variables of the token */  
    string public standard = 'Token 0.1';  
    string public name;  
    string public symbol;  
    uint8 public decimals;  
    uint256 public totalSupply;  
  
    /* Allow interface to create tokens */  
    function MyToken( ... )  
  
    /* Send coins */  
    function transfer( ... )  
  
    /* Allow another contract to spend some tokens in your behalf */  
    function approveAndCall( ... )  
  
    /* A contract attempts to get the coins */  
    function transferFrom( ... )  
}
```

CURRENCIES CAN BE MANY THINGS - EVEN VOTING RIGHTS

- Symbol = %
- Decimals = 2
- Name = Equity

Contracts can also be linked, which allows governance contracts (DAOs) to then be able to vote and control upon custom currency transfers...

WHAT'S THE DIFFERENCE BETWEEN PUBLIC & PRIVATE CHAINS?

COULD ENERGY BE THE GLOBAL RESERVE OF THE FUTURE?

COULD ENERGY BE THE GLOBAL RESERVE OF THE FUTURE?

COULD ENERGY BE THE GLOBAL RESERVE OF THE FUTURE?

COULD ENERGY BE THE GLOBAL RESERVE OF THE FUTURE?

**THE BANKS OF THE FUTURE
HAVE ZERO EMPLOYEES**

BANKING ON THE FUTURE OF BLOCKCHAINS

- With banks already KYC and AWL compliant, there are no entities more suited to be offering digital currency brokerage and key management
- With the advent of smart-contracts, banking becomes a sequence of code
- Regulation and compliance would be designed as part of the protocol
- If retail and commercial banking processes were 100% based upon blockchains, staffing requirements could be reduced by at least 90%
- Existing internal infrastructure can be replaced by distributed protocols

2ND PLACE WINNER OF THE DBS BLOCKCHAIN HACKATHON

The image shows a hand holding a white smartphone displaying the HyperBank mobile application. The app's interface includes a header with the 'hyperbank' logo and a user profile for 'Tristan Gomez'. Below this are two main sections: 'Monthly Accounts' (12) and 'Monthly Transactions' (128) on the top row, and 'Total Accounts' (28) and 'Total Transactions' (1,286) on the bottom row. A transaction history section follows, showing three entries: '2 Hours Ago - New Account Manuel Rigardo', '18 Hours Ago - TX Jarvis Silo to Manuel Rigardo', and '1 Day Ago - New Account Jarvis Silo'. At the bottom is a navigation bar with icons for globe, user, plus, document, and folder. To the right of the phone is a laptop screen displaying the HyperBank website with the tagline 'hyperlocal banking for the unbanked'. It features a text input field for email and a yellow 'APPLY' button.

The application that was previously known as NuBank won 2nd place at the recent [DBS Hackathon](#) in Singapore and is now HyperBank.

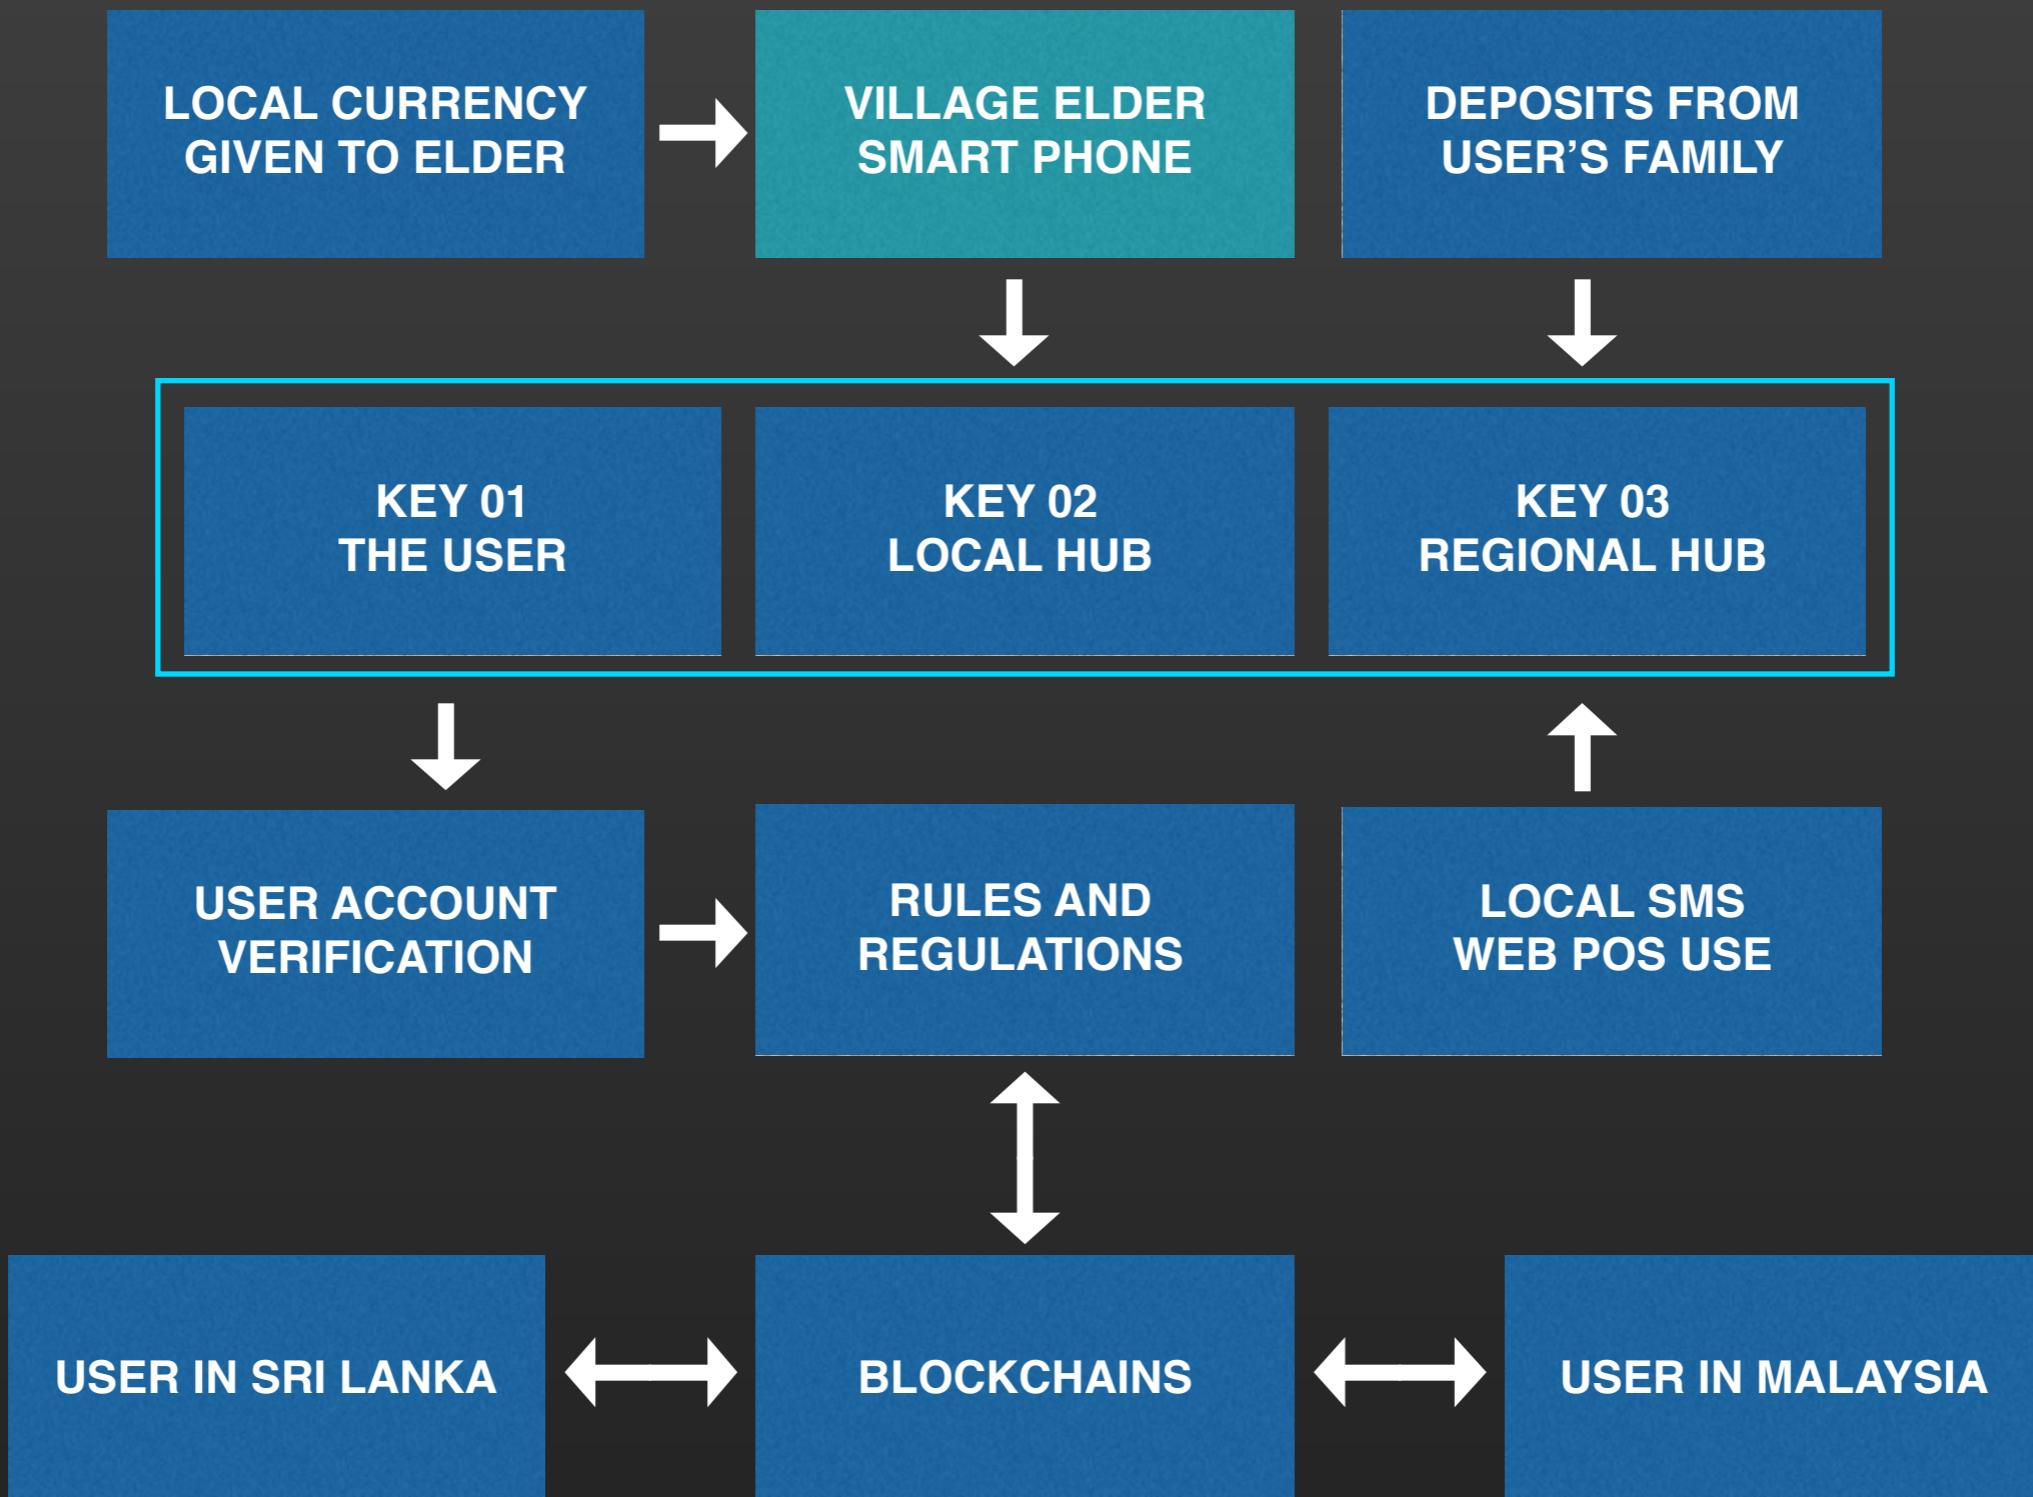

We utilize the blockchains in order to provide a secure and fully auditable digital trail of transactions but avoid volatility by keeping transfers at fixed local currencies with multi-signature signing from top-tier institutional financial partners.

Consumers communicate using standard SMS functionality directly with their village elders who then use their smartphones to record and relay transactions to the blockchain - providing fully distributed M-Pesa functionality.

PROVIDING HYPERLOCAL BANKING TO THE UNBANKED

- One village elder with smart-phone creates and verifies accounts locally
- Multi-signature keys provided to elder, account owner and regional hub
- Regional hubs could be traditional banks - acting as arbitrators for disputes
- Deposits can be made in any currency accepted both locally or regionally
- Local users transfer directly via local hubs or internationally via regional hub
- Standard SMS can be used to transfer funds and make direct payments
- Web-based technology can be utilized by other inter-network participants

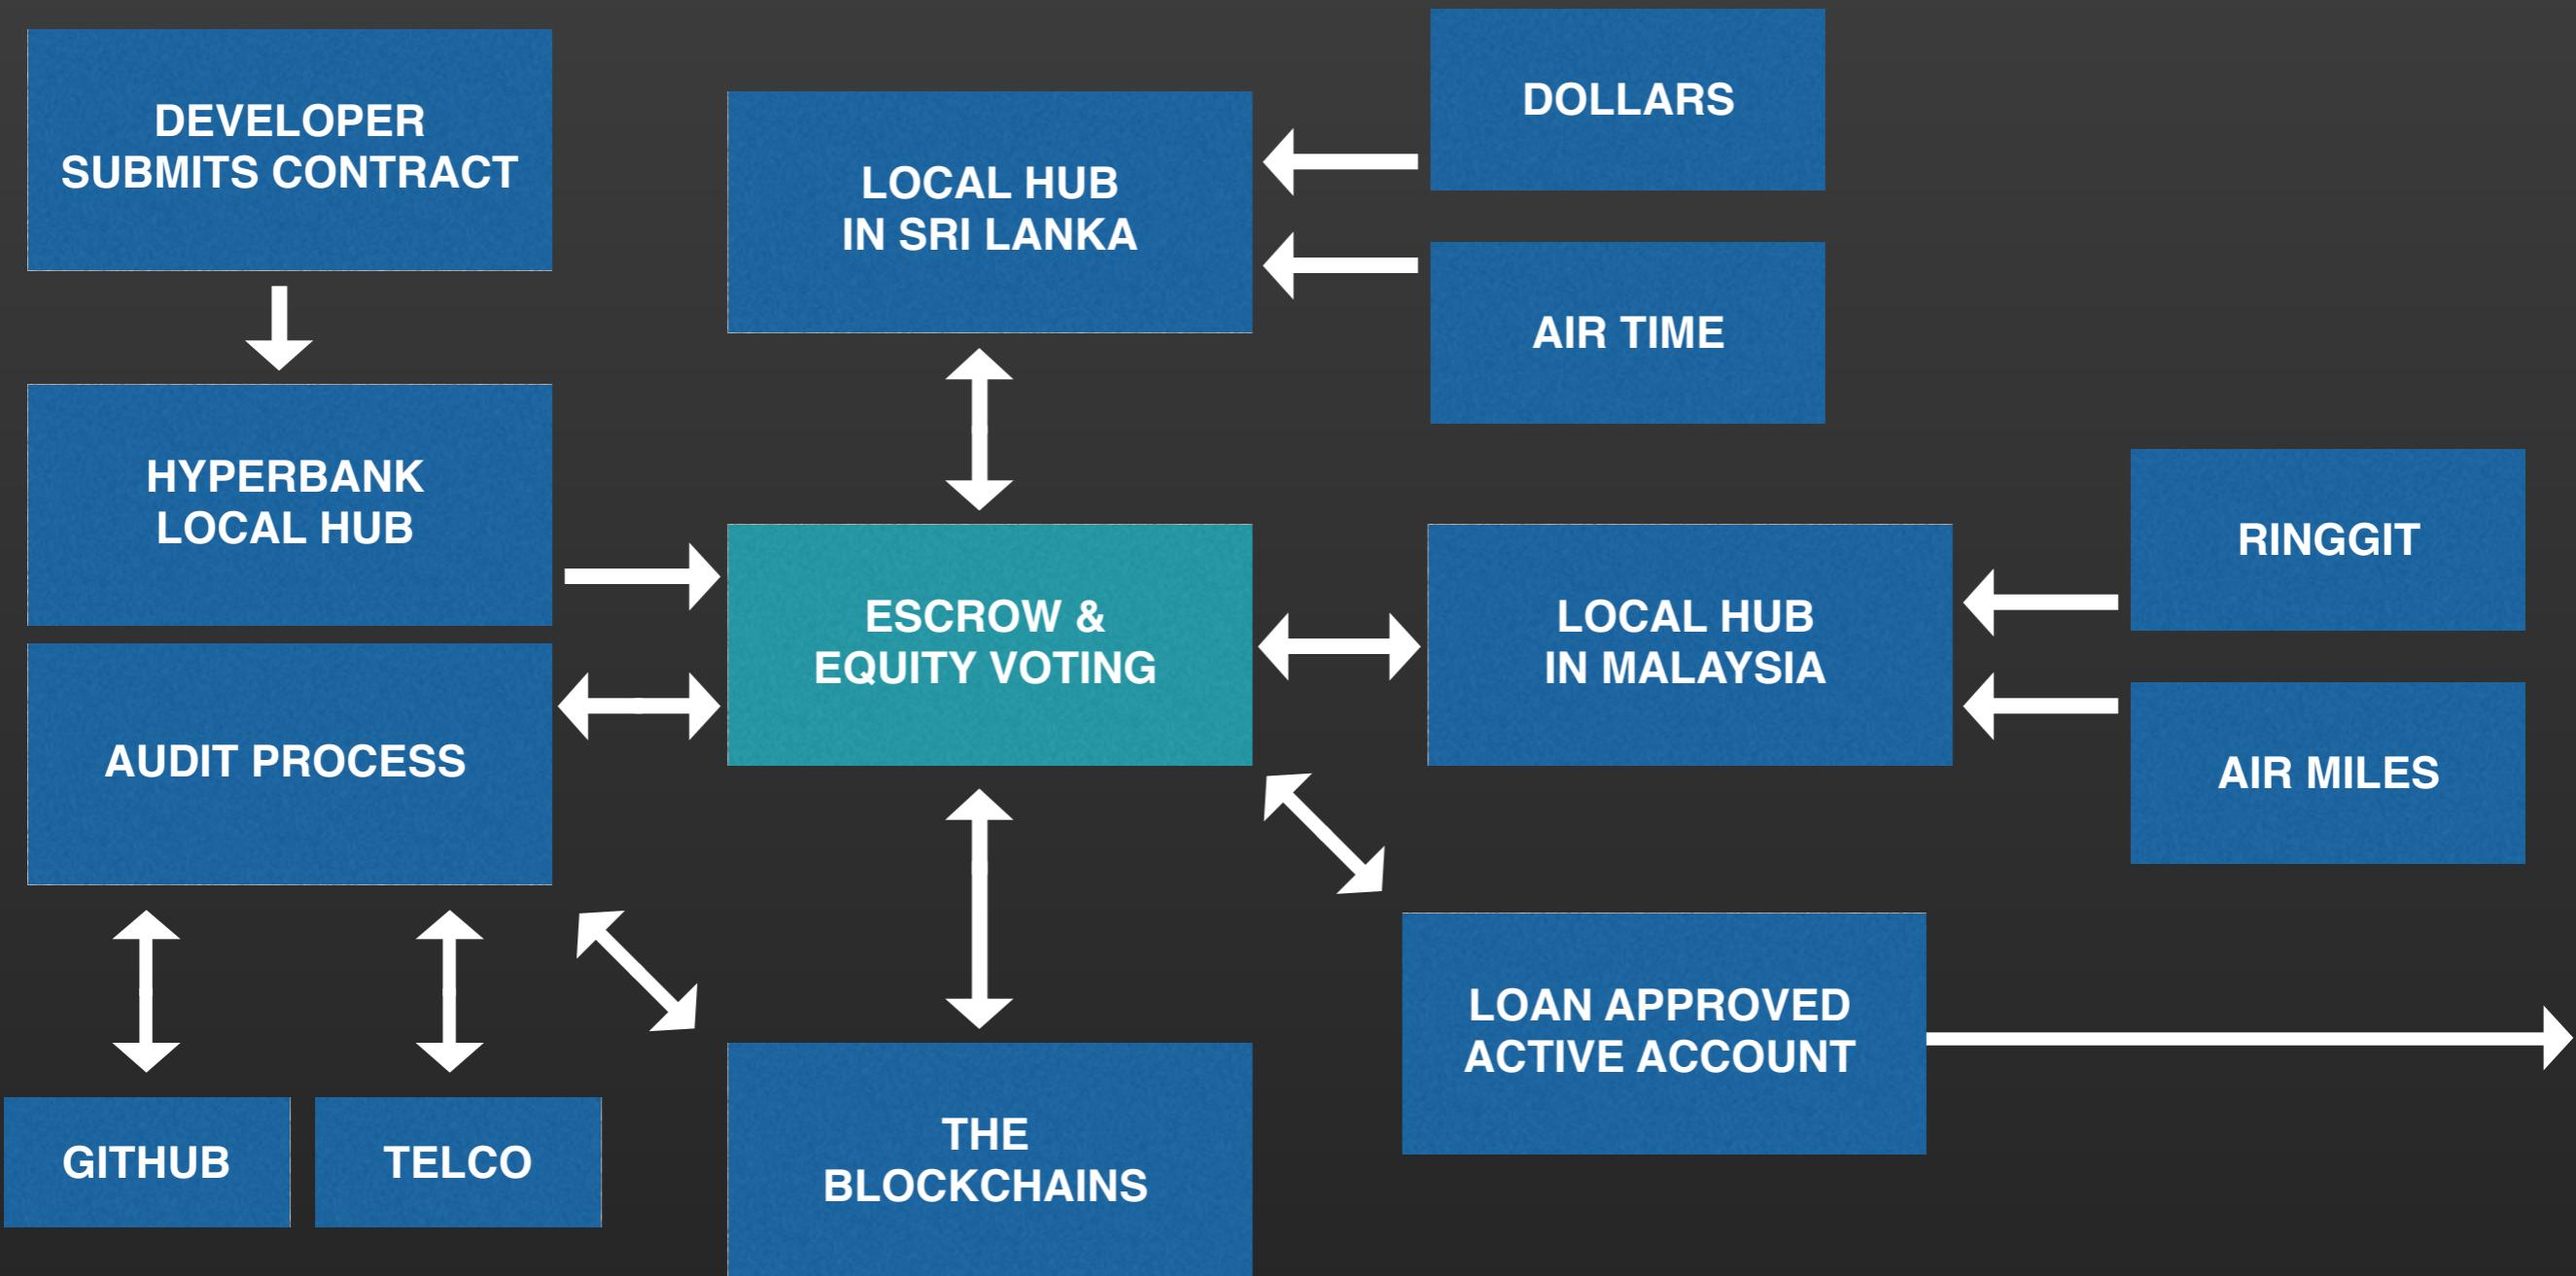

USE CASE 01 - HYPERLOCAL BANKING IN A GLOBAL WORLD

DEVELOPER APPLIES FOR A LOAN TO START A BUSINESS

- The developer applies for a business loan via his local HyperBank hub
- His past personal banking and app development history is auto-assessed
- His application process creates temporary contract for global review
- Global hubs review and auto-invest from their regional deposits
- Deposits can be made with any interconnected network currency or service
- New distributed organization created with all shares belonging to developer
- Deposited funds are then allocated to the specific vendor escrow accounts

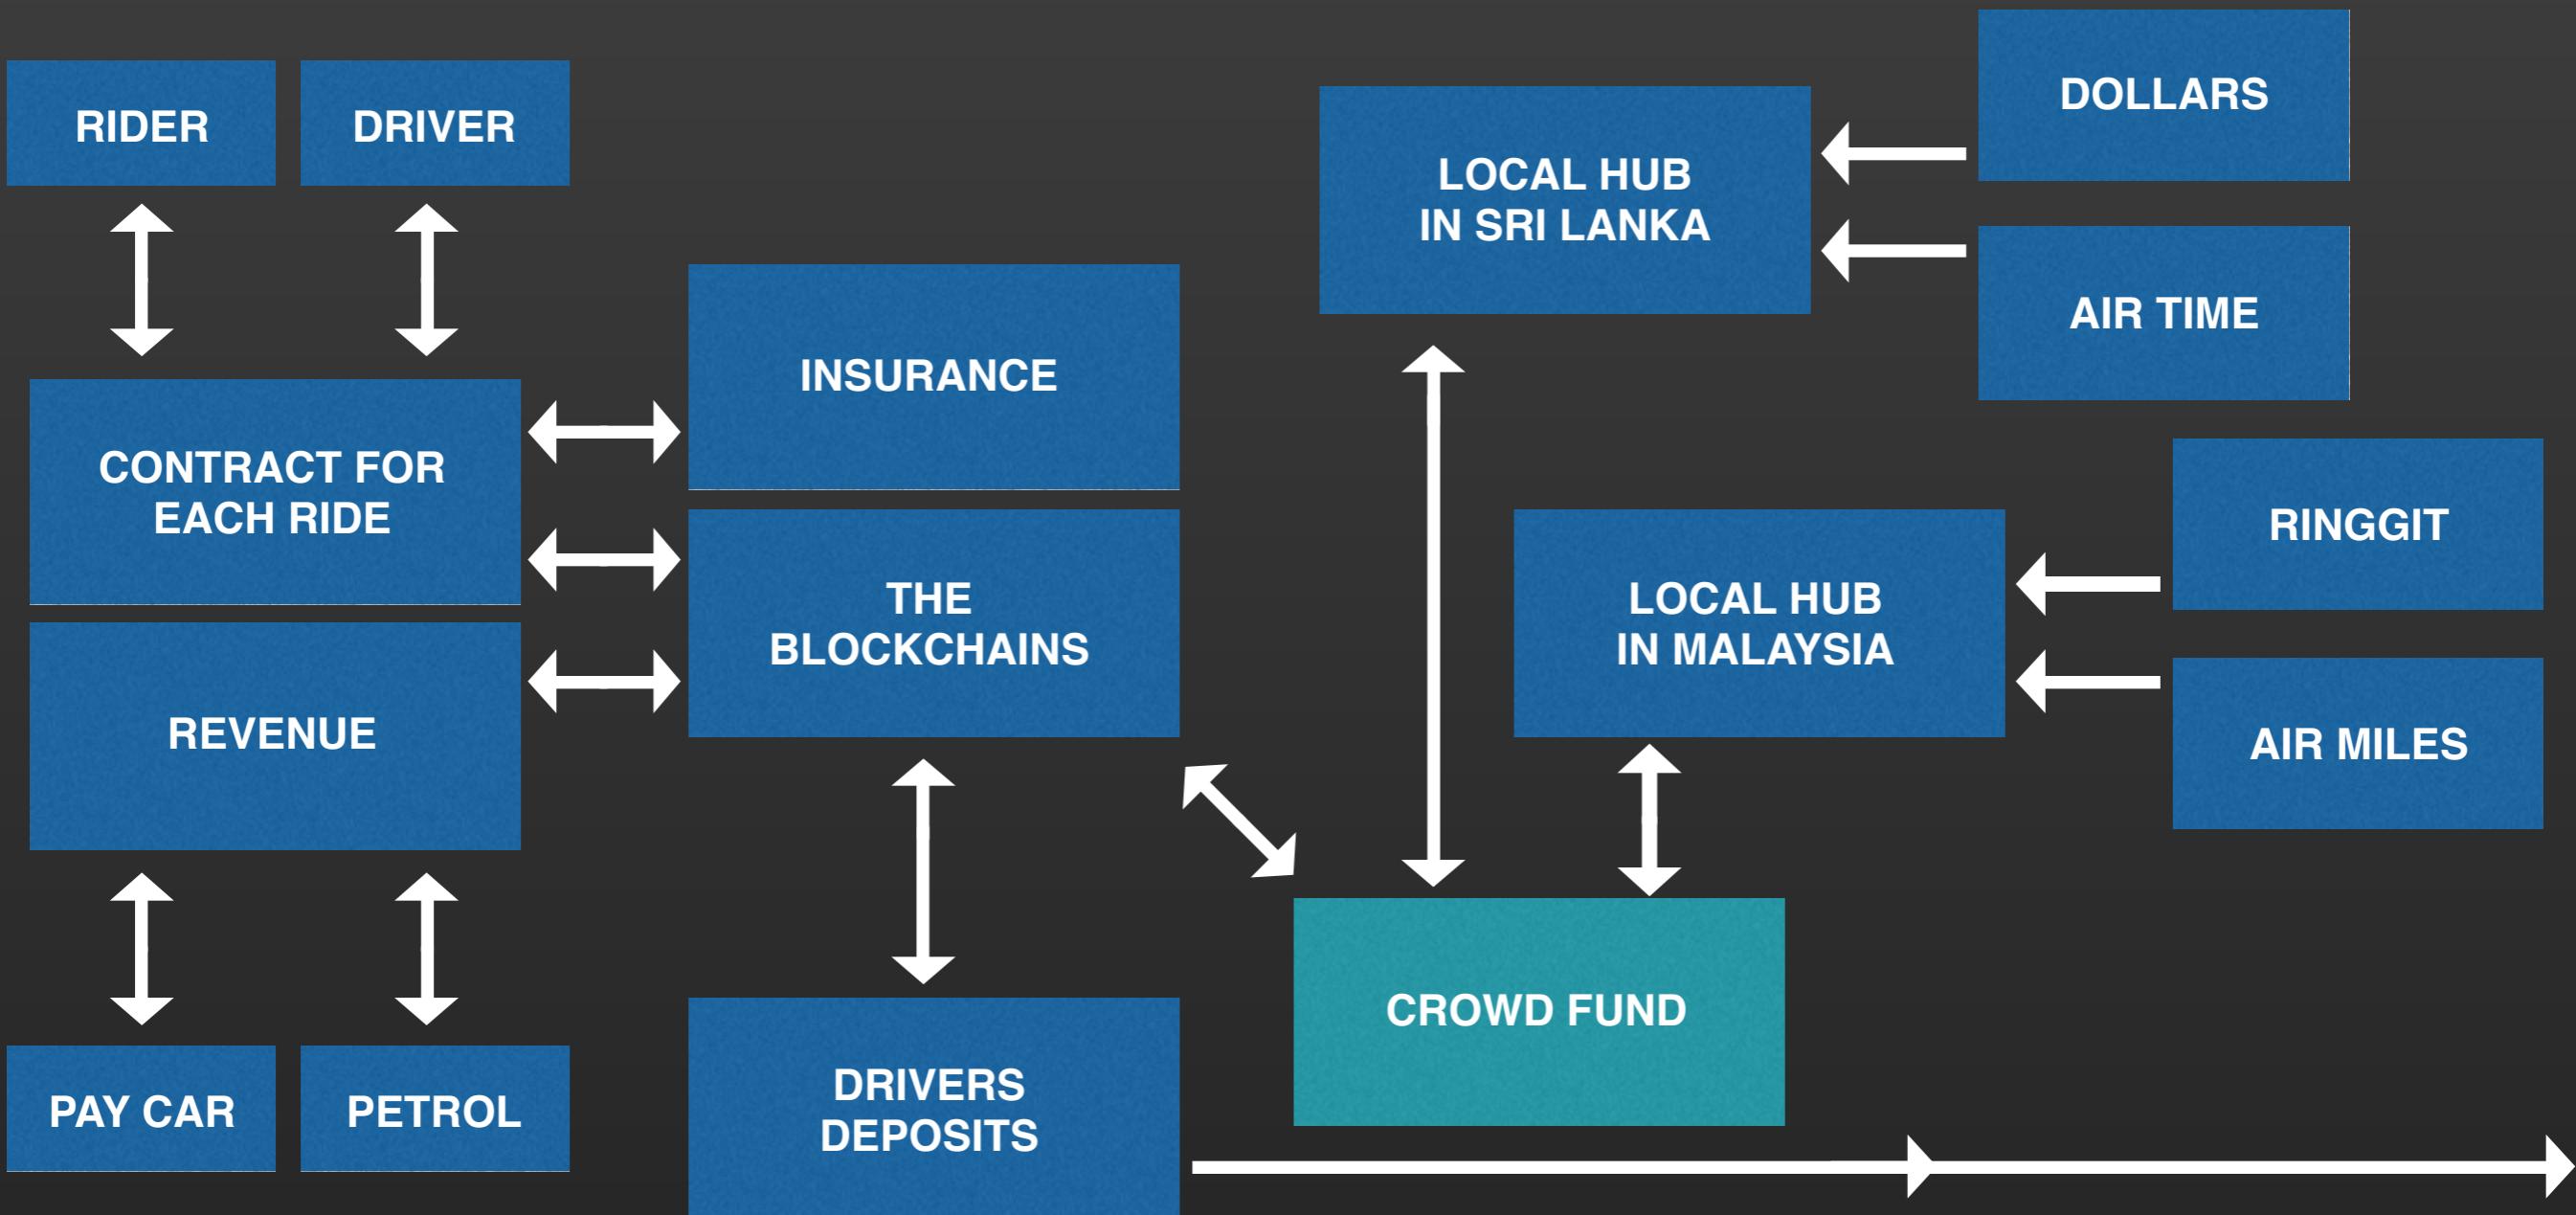

USE CASE 02 - GLOBAL LOANS VIA LOCAL HYPERBANK HUBS

FUNDING A SELF-MANAGED UBER-LIKE SERVICE

- After building the prototype, developer and team start equity crowd-fund
- Investments can be made with any network currency - even air miles work
- Investment received and equity now allocated between partners & team
- Audited code and configured contracts are then added to blockchains
- Changes require majority of votes and profits are automatically allocated
- Passengers pay drivers directly, with insurance & tax payments automated
- Car repayments & pre-paid petrol are automatically funded per passenger

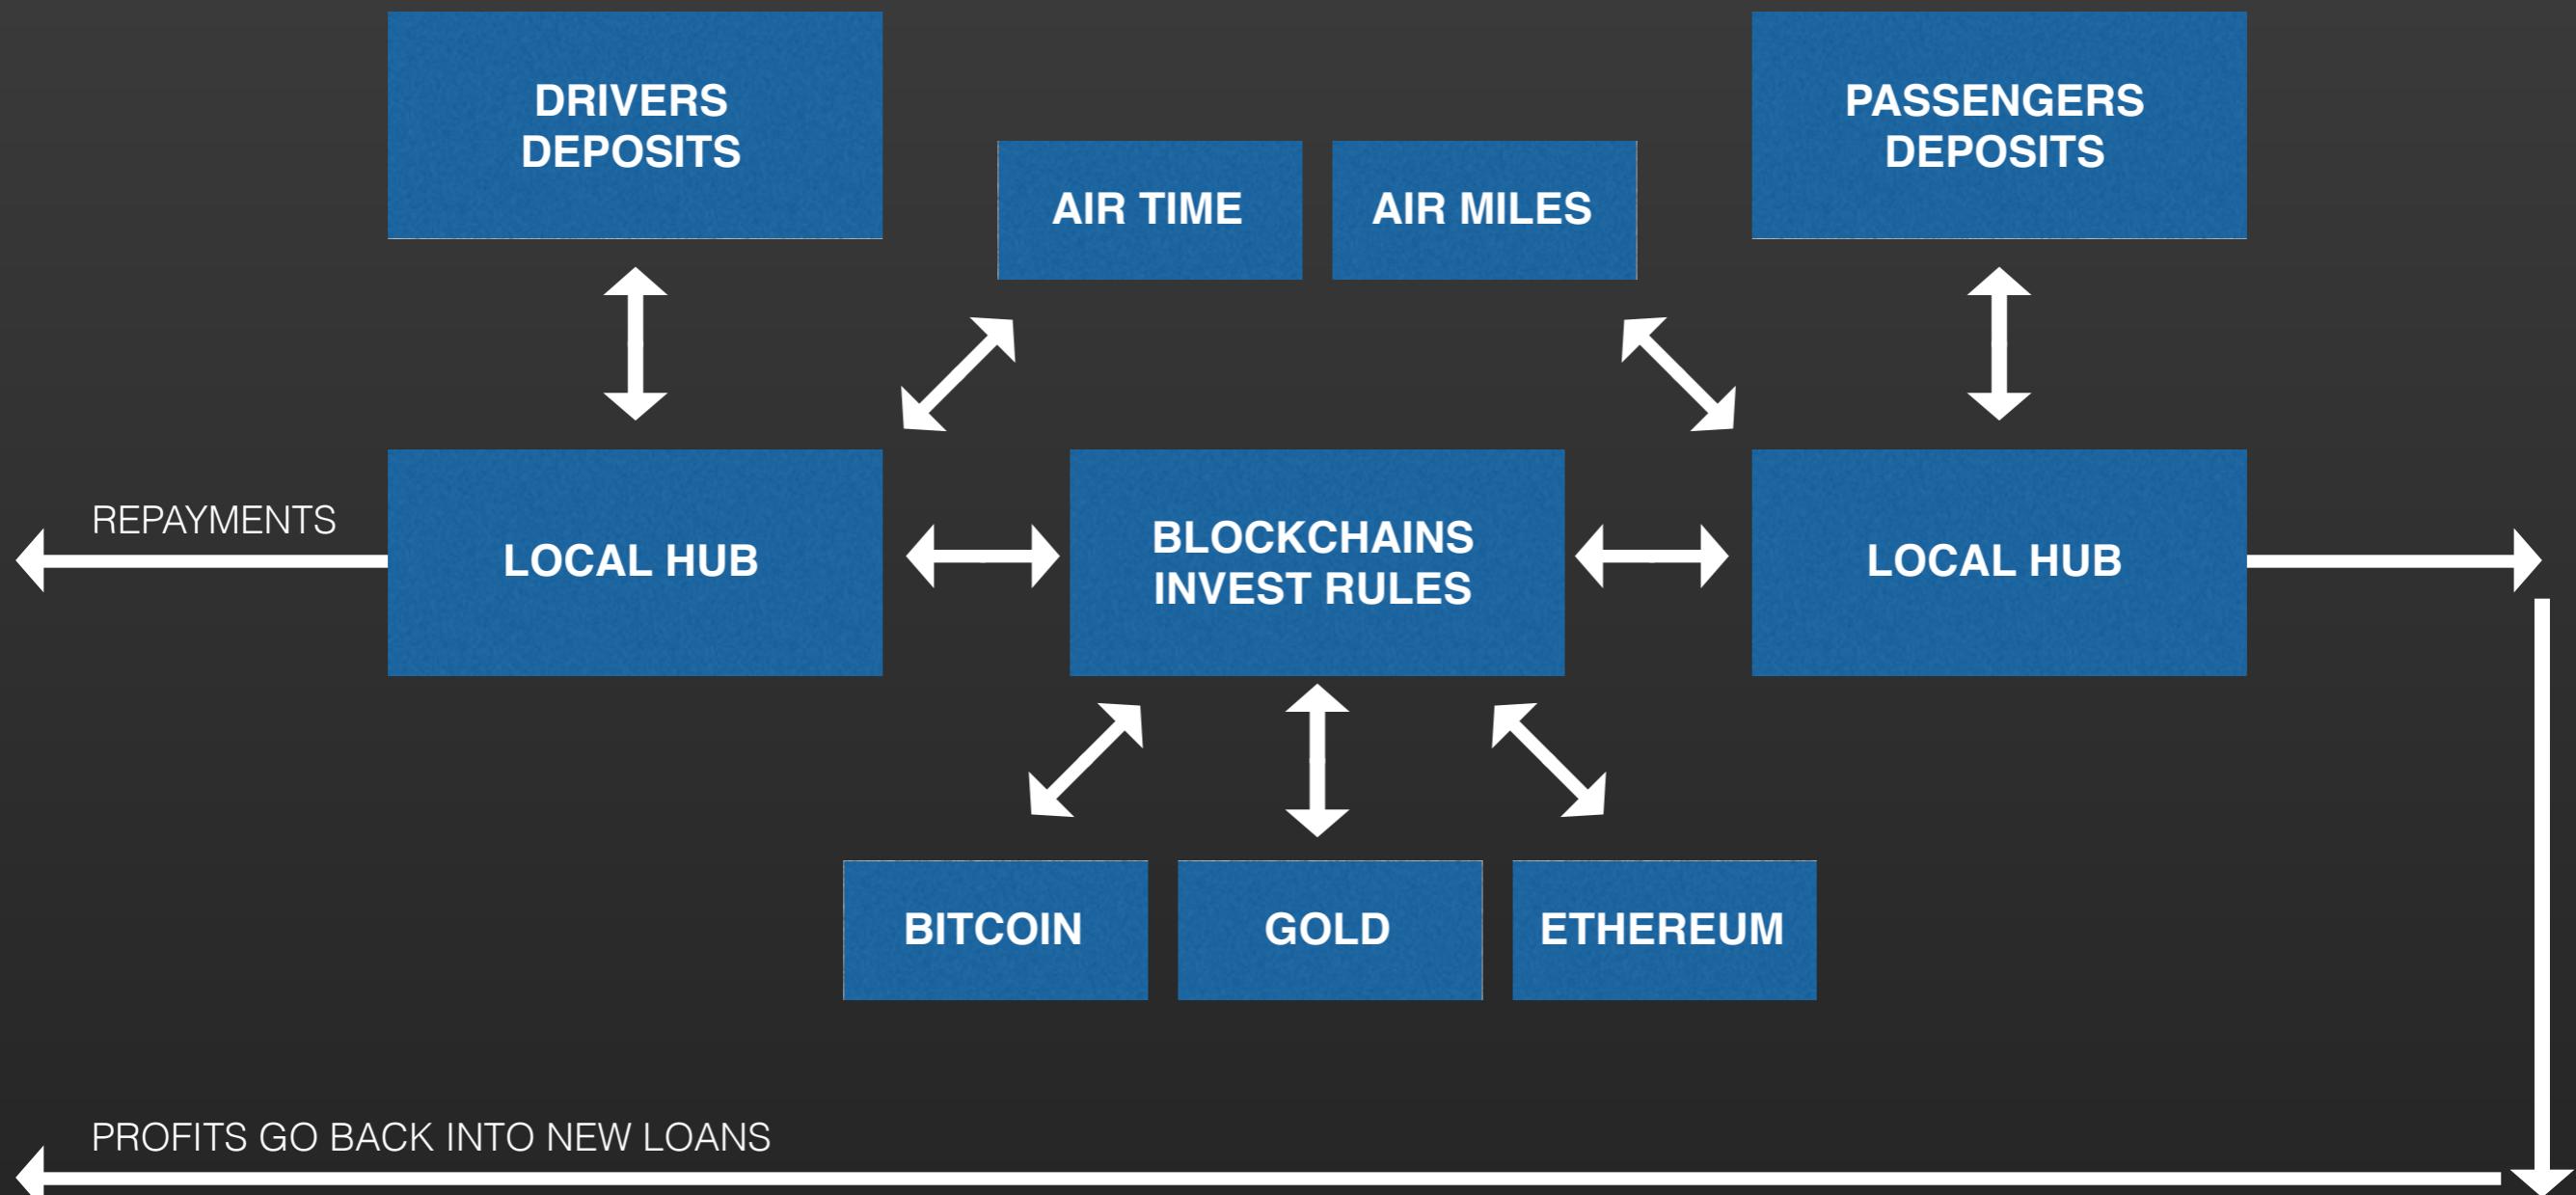

USE CASE 03 - CROWD-FUNDING AUTOMATED ACCOUNTING

EARNINGS INCREASED BY DISTRIBUTED INVESTMENT ACCOUNTS

- Drivers can increase earnings by leaving deposits to auto-invest themselves
- Passengers can earn free rides by pre-paying and auto-investing deposits
- Passengers can pay using any currencies or value from investment portfolio
- HyperBank network is automatically re-paid via incoming company revenue
- Equity owners are automatically paid dividends based on company profits
- Both passengers and drivers are part of the same global reputation system
- Inescapable audit trail of every aspect of every component of the business

USE CASE 04 - AUTO-INVESTING INTO GLOBAL ARBITRAGE

TO SUMMARIZE

- The next IT revolution is already underway and finance is only its first target
- Although the future of Bitcoin is uncertain - blockchains are here to stay
- Distributed ledger technology will continue growing at an increasing pace
- **Like databases, there is no blockchain suitable for every use-case**
- Remember to keep a blockchain-agnostic view when developing solutions
- Don't forget that whatever is controlling the private keys **owns** the money

THESE ARE SOME OF THE THINGS WE DO OR HAVE DONE

- We provide company-wide education, training and blockchain workshops
- We provide self-hosted blockchain agnostic parsers, developer APIs & tools
- We provide consultancy and implementation services utilizing blockchains
- We've developed several open-source blockchain-based applications
- We've worked with banks and other financial institutions and regulators
- We've built platforms combining Ethereum contracts with Bitcoin security
- We've developed the following non-financial blockchain agnostic protocols

OUR PROTOCOLS WORK ON ALMOST ANY BLOCKCHAIN

EVERSTORE

DISTRIBUTED STRUCTURED DATA

By using a combination of Hierarchical Key Generation and standardized OP_Return methodology, we are able to store an almost unlimited amount of structured data on any blockchains or ledgers that support OP_Returns or an equivalent API accessible arbitrary data-storage field within their HD-compatible transaction streams.

 **blockauth**

DECENTRALIZED ID AND AUTHENTICATION

By introducing Hierarchical roles and privileges using a similar methodology to Everstore, BlockAuth is able to verify and transmit secure messages and independent authorization to and from other BlockAuth enabled individuals and services. Store avatars and social media profiles to remove the need for repetitive form filling & choose who gets what.

 **dnkey**

KEY LOGISTICS & BROADCASTING

DNKey not only enables basic key-aliasing, which allows other systems, services and users to replace long complicated public keys with memorable domain based identities, which in-turn allows for easier key sharing, it can also enable revocation abstraction layers - but also provides advanced methods for generating vast amounts of secure deterministic key-pairs.
