DISTRIBUTED LEDGERS Vs BLOCKCHAINS

PICKING THE CORRECT NETWORK

SANTANDER BANK - FIRST TO ADMIT US\$20B DLT ANNUAL SAVINGS

- Reconciling Multiple Central Ledgers Vs Auto-Audited Distributed Ledgers?
- O Batch Processing CSVs every 24 Hours Vs Really Real-Time Settlement?

BITCOIN

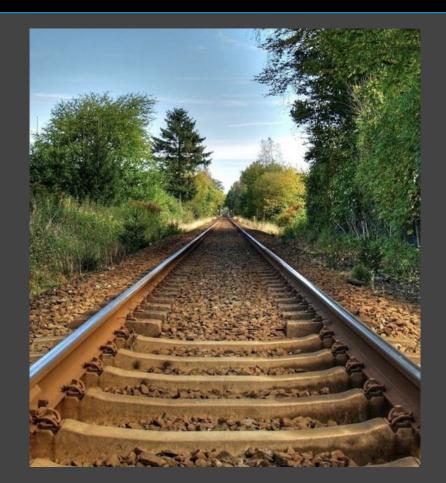

(the first application / popular digital asset)

Vs

BLOCKCHAINS

(underlying tech / shared public ledger)

CONSENSUS - WHAT MAKES PROOF OF WORK SO SPECIAL ...?

THE MOST IMPORTANT OF ALL - THERE ARE NO COINS

ON THE BLOCKCHAINS EVERY ACCOUNT IS A SET OF KEYS

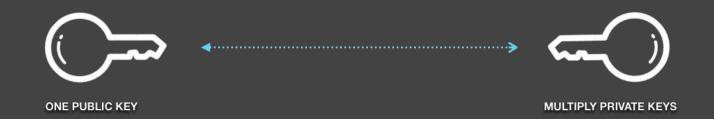

AND EACH "ADDRESS" REQUIRES A PRIVATE KEY TO ACCESS IT

SOME ADDRESSES EVEN REQUIRE MULTIPLE KEYS

WHOEVER HOLDS THE PRIVATE KEYS CONTROLS THE DATA

- Example of a Bitcoin public address (derived from the public key):
 1GzBZ7eK6wzNjp1Wt6AxHo73kJL2tzoErq
- Example of a Bitcoin private key (used to transfer funds from address):
 L1winVkoRmxMdHKbwssx33Z9ZEuXeJ1eP9CVYvnNn4TdYA32GsWY
- Example of a Bitcoin extended private key (used by HD protocol):

GETTING STARTED

MAPPING USE CASES

CHOOSING THE CORRECT TECHNOLOGY AT THE CORRECT TIME

SHORT TERM OBJECTIVES - PoC (Proof of Concept)

- Ensure your foundations are blockchain neutral (frameworks, APIs or QTs?)
- Be confident with key management solutions (deterministic or hardware?)

MEDIUM TERM OBJECTIVES - MVP (Minimal Viable Products)

- Privately beta test product, generate marketing material and tracking tools
- Evaluate final scaling requirements for production ready public launch

LONG TERM OBJECTIVES - Production Ready

- Integrate with and (or) replace centralized data with new distributed networks
- Engage multiple external partners and (or) developer communities

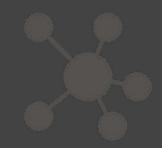

BREAKING THINGS DOWN INTO SMALLER STEPS

DISTRIBUTED DATA

STEP 1

Use existing public blockchain technology to distribute structured data used through all future projects - from token variables to smart contract oracles

CUSTOMIZED TOKENS

STEP 2

Generate fixed, centrally or decentralized minted supplies of custom tokens to represent real-world assets and (or) incentivize new network needs

SMART CONTRACTS

STEP 3

Integrating smart contracts with legally binding real-world contracts requires multiple entities working together on neutral platforms and redefining regulation along the way

NEWS

our mission is to educate organizations throughout asia in both the legal and technical implications of distributed ledgers

We are a non-profit digitally distributed organization that is using and promoting blockchain governance as a method for collaboration between various business entities and existing community efforts across Asia

NEUROWARE'S AGNOSTIC PROTOCOLS - DESIGNED TO WORK WITH ANY BLOCKCHAIN

EVERSTORE - THE FIRST BLOCKCHAIN POWERED DATABASE

- Everstore is the first protocol capable of storing large amounts of structured data directly on a blockchain - bypassing singular transaction limitations
- Replicates full CRUD-like functionality with schemas, indexes & relationships
- O Data encoded via an Everstore instance is available for the life of the ledger

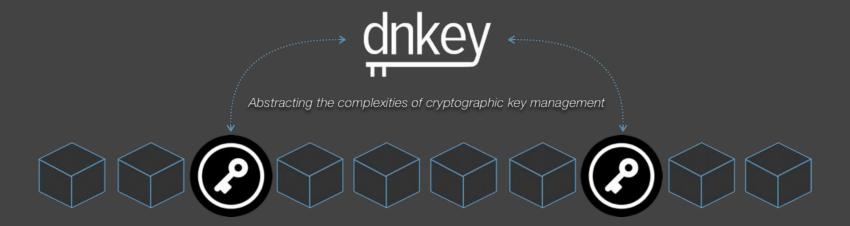

BLOCKAUTH - IDENTITY MANAGEMENT & AUTHENTICATION

- Enables intelligent account authentication via cryptographic keys.
- Private keys replace passwords whilst the public keys becomes an identity
- Applications and organizations can independently authenticate credentials

SIMPLIFIED CRYPTOGRAPHIC IDENTITIES WITH DNKEY

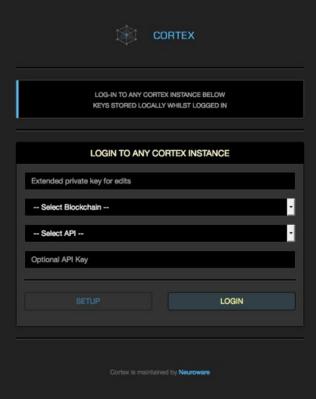

- Scalable key logistics across multiple platforms, applications, and processes
- Enables DNS style abstraction for key retirement, replacement, and rotation
- Decodes memorable, trustworthy domain names to public cryptographic keys
